

Figure S1. SVBP₃₋₄₉ stabilizes recombinant VASH1⁵⁷⁻³⁰⁶. SDS-page gel indicates that the majority of recombinant His₆-VASH1₅₇₋₃₀₆ alone expressed as inclusion body, whereas co-expression of His₆-VASH1₅₇₋₃₀₆ and SVBP₃₋₄₉ greatly enhanced the solubility of VASH1. P: Pellet; E: Elution from Ni-NTA resin.
