## **Final Clinic Flow Protocol for Postpartum Depression Screening**

Population: All mothers of infants who present at 2 month and 4 months well visits

Visit: Well Child visit

Frequency: 2 times at 2- and 4-month visits

Clinic front desk identifies the correct age for the well child visits

EPDS administered to all mothers at 2 and 4 months well visits

Medical Assistants or nurses collect the EPDS questionnaire and place it in the chart of the patient

Health care providers scores and reviews the EPDS and if positive gets more history

With the consent of the parent, Medical Social Worker or Behavioral Health Consultant discuss the resources in the community and encourage the new mom to reach out to their PCP and or their ObGyn.
