

Control 1 (C1)

p_value is from the negantive-binomial test for the detection differential genes over the two cell groups.

avg_logFC is for the average logarithm values of fold difference.

pct.1 is for the percentage of cells that gives the signal on the designate gene on the target cell group/cluster.

pct.2 is for the percentage of cells that give the signal on the designate gene on the counterpart of the target cell group/cluster.
