

Figure S1. To confirm transfection, 2D cultures expressing plain GFP construct (pQCXIP GFP), KRAS V12 (pQCXIP GFP KRAS V12) or BRAF V600E (pQCFLAP BRAF V600E) constructs were lysed and analyzed using western blot analysis with respective antibodies, including anti-GFP (A), and anti-BRAFV600E (B) and anti-tubulin as a control. One western blot was cropped to a composite panel to avoid empty lanes between the samples. 2D, 2-dimensional; GFP, green fluorescent protein.
