

Figure S3A

Fig. S3A. Protein sequence alignments of MhqR homologs in bacteria. Alignment was performed with ClustalQ2 and presented in Jalview. Intensity of the blue color gradient is based on 50% sequence identity. The following protein sequences were aligned and the % identity to MhqR of *S. aureus* is given in parenthesis: MhqR (SACOL2531) of *S. aureus* COL, MhqR (BSU13670) of *B. subtilis* (38.1%), CN491_21485 of *B. cereus* (43.3%), CN907_04455 of *B. anthracis* (42.0%), HMPREF9372_1735 of *Sporosarcina newyorkensis* (43.2%), EF_1668 of *Enterococcus faecalis* (43.8%), YusO of *Streptococcus pneumoniae* (42.0%), WA34_10590 of *S. agalactiae* (43.8%), BUZ41_02330 of *S. haemolyticus* (77.8%), BU121_11800 of *S. xylosus* (66.7%), A0131_01385 of *S. saprophyticus* (67.4%) and CP995_08720 of *Klebsiella pneumoniae* (58.3%). The non-conserved cysteine residues in MhqR homologs are marked in red.

Fig. S3B. Multiple protein sequence alignments of the MhqR and QsrR-regulated phospholipase MhqD and dioxygenases MhqE, CatE and CatE2 of *S. aureus* with homologous enzymes of *B. subtilis*. The alignment was performed with ClustalΩ2 and is presented in Jalview. Intensity of the blue color gradient is based on 50% sequence identity. The following protein sequences were aligned and the % identity between *S. aureus* and *B. subtilis* enzymes is given in parenthesis: MhqE (SACOL2530) of *S. aureus* COL with MhqE (BSU19570) of *B. subtilis* (35.4%), MhqD (SACOL2529) of *S. aureus* COL with MhqD (BSU19560) of *B. subtilis* (38.8%) and CatE2 (SACOL2533) of *S. aureus* COL with CatE (BSU08240) of *B. subtilis* (34.8%) and CatE (SACOL0408) of *S. aureus* COL with MhqA (BSU12870) of *B. subtilis* (35.4%).
