

Figure. S2

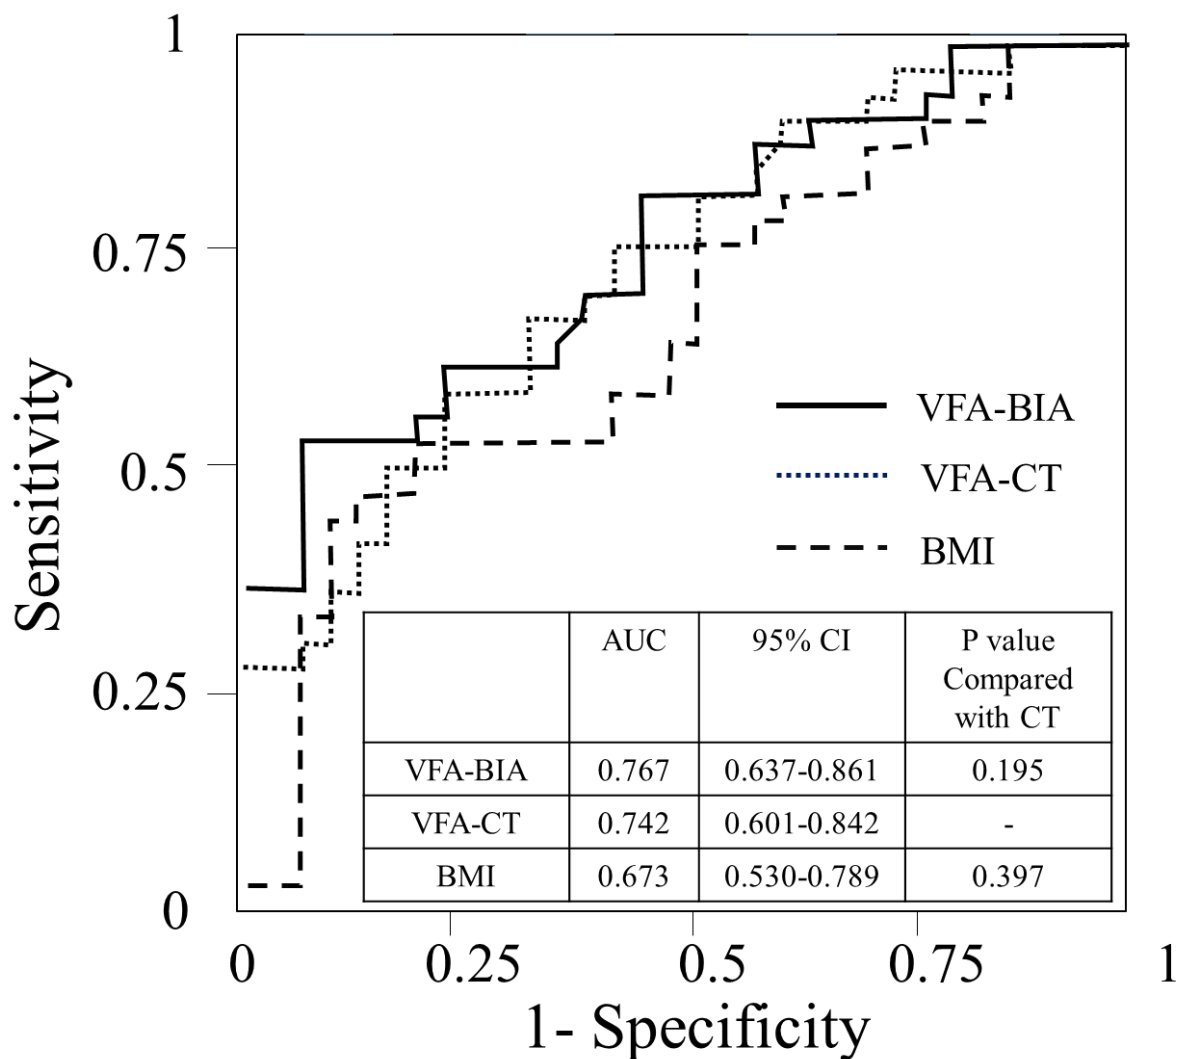

Figure.S2 The ROC for identifying the presence of comorbid obesity-related cardiovascular risk factors among male patients. Cardiovascular risk factors were defined as hypertension (SBP \geq 140 mmHg and/or DBP \geq 90 mmHg or under treatment) and dyslipidemia (HDL-C $<$ 40 mg/dL and/or triglycerides \geq 150 mg/dL or under treatment) in addition to T2D. The curves are for the VFA -BIA (bold line), the VFA-CT (dotted line), and BMI (broken line).
