

Figure S1. Kaplan-Meier survival estimates for freedom from ASVD-death, stratified by quintiles of each inflammatory marker. Log-rank chi-square p-values: **A.** hs-CRP: $p < 0.001$. **B.** Fibrinogen: $p < 0.001$. **C.** serum albumin: $p < 0.001$. **D.** IL-1 β : $p < 0.001$. **E.** IL-1RA: $p = 0.04$. **F.** IL-6: $p < 0.001$. **G.** TGF- β : $p = 0.03$. **H.** TNF- α : $p < 0.001$.
