

A 125 autoantigens involved in cell death and survival

B 85 autoantigens involved in cell cycle regulation

C 75 autoantigens involved in DNA replication, recombination, and repair

	Complex/group		Growth factor		Kinase		Peptidase		Transcription regulator		Transmembrane receptor
	Enzyme		Ion channel		Other		Phosphatase		Translation regulator		Cytokine
More	Less		Protein-protein interaction and correlation				Direct interaction				
	Upregulated		Activation, causation, expression, localization, modification, molecular cleavage, phosphorylation, and regulation				Indirect interaction				
	Downregulated
