

Western blot analysis of TOLLIP expression on macrophages from WT and *Tollip*^{-/-} mice. *Tollip*^{-/-} mice were rederived and backcrossed on C57Bl/6 background.

TOLLIP expression was measured by Western blot on THP-1 cell lines with TOLLIP deleted using CRISPR-Cas9 gene editing (TOLLIP-KO) or control, empty vector cell lines with CRISPR-Cas9 machinery transfected (EV), as well as beta-actin loading control.

Western blot analysis of ubiquitin expression from TOLLIP-KO (T1) and empty vector (H1) THP-1 cell lines after four hours under nutrient-rich (RPMI) or starvation (EBSS) conditions. + indicates presence of chloroquine, an autophagy inhibitor.
