STAT3 Activity Promotes Programmed-Death Ligand 1 Expression and Suppresses Immune Responses in Breast Cancer

Ioannis Zerdes ^{1,*}, Majken Wallerius ¹, Emmanouil G. Sifakis ¹, Tatjana Wallmann ¹, Stina Betts ¹, Margarita Bartish ¹, Nikolaos Tsesmetzis ², Nicholas P. Tobin ¹, Christos Coucoravas ³, Jonas Bergh ^{1,4}, George Z. Rassidakis ^{1,5}, Charlotte Rolny ¹ and Theodoros Foukakis ^{1,4,*}

Table S1. List of cancer cell lines used in the study.

Cell Line	Tissue	Organism	Disease	Comments
MCF7 ¹	Mammary gland/breast	Human	Adenocarcinoma	Luminal
MDA-MB-231 ¹	Mammary gland/breast	Human	Adenocarcinoma	Triple-negative
BT549 ¹	Mammary gland/breast	Human	Ductal carcinoma	Triple-negative
SKRB3 ²	Mammary gland/breast	Human	Adenocarcinoma	ER-/PR-/HER2+
4T1 ³	Mammary gland/breast	Mouse	Animal stage IV human breast cancer	Originated from tumors developed in BALB/cfC3H mouse; highly metastatic; Triple –negative
MAC2A ⁴	Lymphoid	Human	Anaplastic large cell lymphoma	ALK –negative
HDLM2 ⁵	Lymphoid	Human	Hodgkin lymphoma	-

¹ Purchased from Sigma-Aldrich and ATCC, USA; ² Provided by Sarah Walker and David Frank (Department of Medical Oncology, Dana-Farber Cancer Institute, and Department of Medicine, Harvard Medical School, Boston, MA, USA); ³ Purchased from Karmanos Cancer Institute, Wayne State University, USA; ⁴ A gift from Dr. Marshal Kadin (Boston, MA, USA); ⁵ Purchased from DSMZ, Germany; **Abbreviations:** ER, estrogen receptor; PR, progesterone receptor; HER2, human epidermal growth factor receptor 2; ALK, Anaplastic Lymphoma Kinase.

Table S2. List of antibodies used in the study.

Antibody	Cat. no	Species	Company	Method(s)
STAT3	#4904	Rabbit (79D7)	Cell Signaling Technology	Western blot
pSTAT3 (Y705)	sc-8059	Mouse (B-7)	Santa Cruz Biotechnology	Western blot, IHC
pSTAT3 (Y705)	#9145	Rabbit (D3A7)	Cell Signaling Technology	Western blot, IHC
PD-L1	#13684	Rabbit (E1L3N)	Cell Signaling Technology	Western blot, IHC
PD-L1	#740-4859	Rabbit (clone SP263)	Ventana (Roche)	IHC
b-actin	A5441	Mouse	Sigma-Aldrich	Western blot
Anti-rabbit IgG	#7074	Goat	Cell Signaling Technology	Western blot

(HRP-linked)				
Anti-mouse IgG (HRP-linked)	#7076	Horse	Cell Signaling Technology	Western blot
Anti-biotin (HRP-linked)	#7075	Goat	Cell Signaling Technology	Western blot
Antibodies		Company		Method
CD163		Leica		
CD11c				
AlexaFluor 488		Life Technologies		Immunofluorescence
AlexaFluor 546				
DAPI		Invitrogen Corp		
Antibodies		Company		Method
CD11b (M1/70)				
CD45 (30-F11)				
Ly6C (AL-21)				
Ly6G (1A8)				
CD86 (GL1)				
CD11c (HL3)				
CD3 (500A2/145-2c11)				
CD8 (53-6.7)		BD Bioscience		Flow cytometry
CD4 (RM4-5)				
CD69 (H1.2F3)				
CD49b (HM ALPHA2)				
MHC class II (I-A/I-E)				
MHC class I (H-2K(d))				
CD25 (PC61)				
FoxP3 (MF23)				
F4/80 (BM8)				
MRC1 (C068C2)				
CD8a (53-6.7)		BioLegend		Flow cytometry
CD279 (29F.1A12)				
CD274 (10F.9G2)				

Table S3. List of primers, siRNA and shRNA target sequences used in the study.

Gene	Sequence (5'-3')	Company	Method
PD-L1 (human)	Forward: CTCCAAATGAAAGGACTCAC Reverse: TCCCTTTTCTTAAACGGAAG	Sigma-Aldrich	RT-qPCR
b-actin (human)	Forward: GACGACATGGAGAAAATCTG Reverse: ATGATCTGGGTCATCTTCTC	Sigma-Aldrich	RT-qPCR
pd-l1 (mouse)	Forward: CAAGTGAGAATGCTAGATGTG Reverse: TCCATCTTGAGTCTTTGGAC	Sigma-Aldrich	RT-qPCR
18S rRNA (mouse)	Forward: TTCCTTACCTGGTTGATCCTGCC Reverse: AGCCATTCGCAGTTTCACTGTAC	Sigma-Aldrich	RT-qPCR
siRNA STAT3 (human)	GAGAUUGACCAGCAGUAUA	Dharmacon™ (Lafayette, CO, USA)	Transient transfection
shRNA Stat3 (mouse)	NM_011486.3.1238s1c1	Sigma-Aldrich	Lentiviral vector transduction
MISSION® Plasmid	CCGGCCTGAGTTGAATTATCAGCTTCTCGAGAAGCTGATAATTCAACT CAGGTTTTTG		

Abbreviations: siRNA, small interfering RNA; shRNA, small hairpin RNA; RT-qPCR, real-time quantitative polymerase chain reaction.

Table S4. Correlation of PD-L1 protein expression in tumor, immune and total cells* with pSTAT3 protein expression in human breast cancer patients. Fisher's exact test was used for the statistical analyses. (* either tumor or immune cells).

	PD-L1 IHC Expression in Tumor Cells			PD-L1 IHC Expression in Immune Cells			PD-L1 IHC Expression in Total Cells		
	Positive	Negative	<i>p</i> -Value	Positive	Negative	<i>p</i> -Value	Positive	Negative	<i>p</i> -Value
pSTAT3-high (<i>n</i> = 41)	22	19	0.66	24	17	0.08	26	15	0.19
pSTAT3-low (<i>n</i> = 42)	20	22		16	26		20	22	

Table S5. Correlation of PD-L1 protein expression in tumor cells with grade and Ki67 status in human breast cancer patients.

	PD-L1 IHC expression in tumor cells		
	Positive (<i>n</i> = 23)	Negative (<i>n</i> = 22)	<i>p</i> -value*
Grade 1-2	4	18	1.982e-05
Grade 3	19	4	
Ki67 < 16%	2	12	0.00106
Ki67 ≥ 16%	20	9	

* Fisher's exact test. For Ki67, there was one patient with unknown status.

Figure S1. Expression of PD-L1 and genetic alteration in control cell line. **A.** High PD-L1 protein expression in immunohistochemistry on sections of FFPE cell pellets of HDLM2 Hodgkin lymphoma cell line (used as positive control). Original magnification: $\times 200$. **B.** Fluorescence in situ hybridization analysis for PD-L1 probe performed on HDLM2 cell blocks. The validated probe (green signal) cover the gene locus at 9p24.1. A centromeric chromosome 9 probe (CEN9, red signal) was used as a control. HDLM2 Hodgkin lymphoma cell line was used as positive control *PD-L1* gene amplification. Original magnification: $\times 630$.

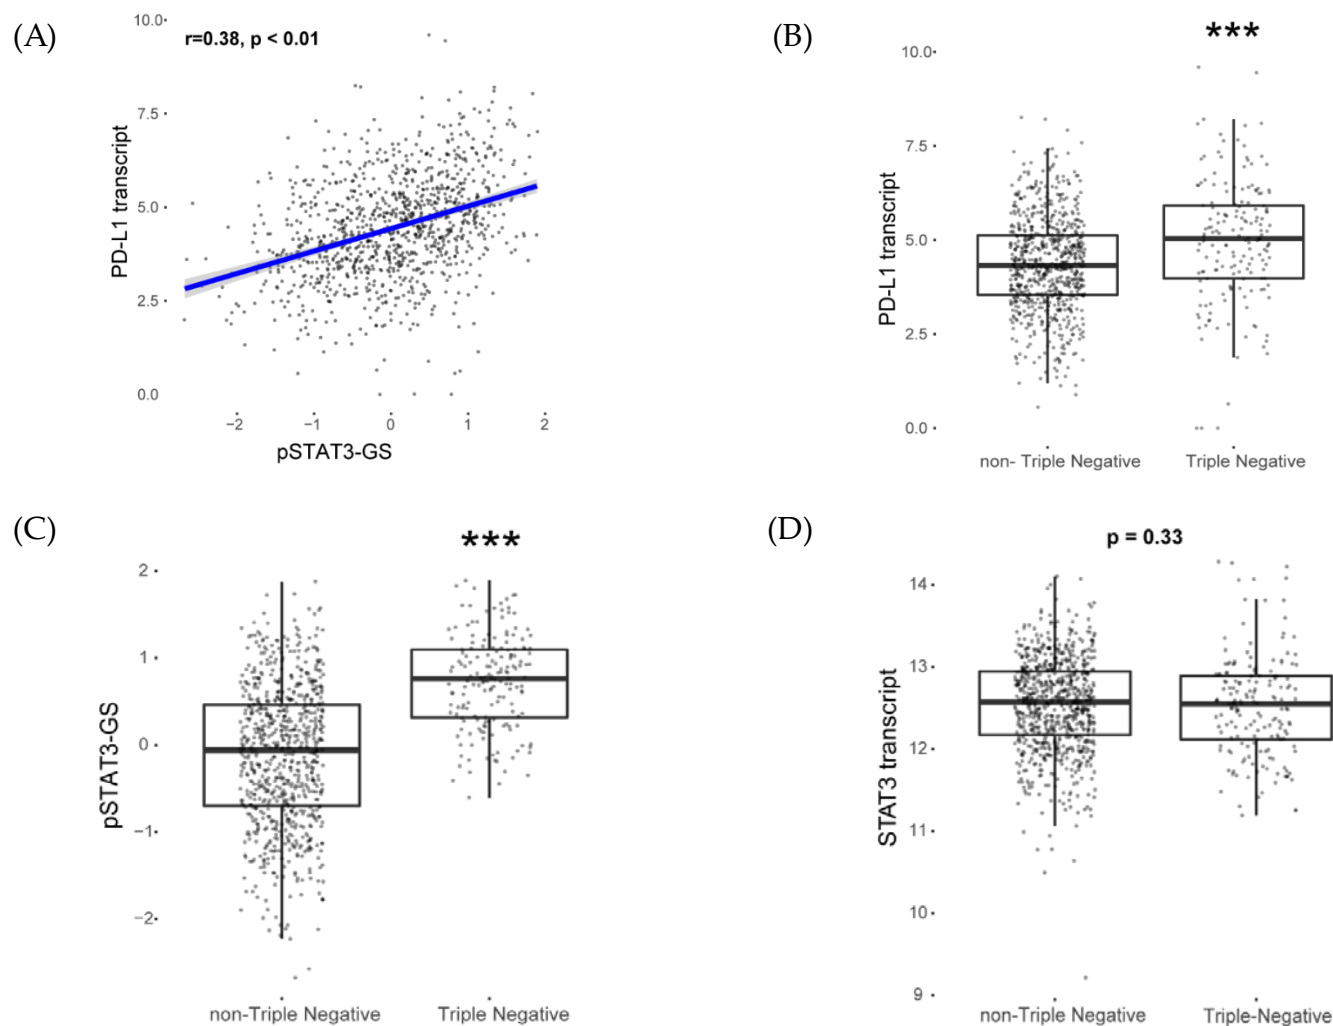

Figure S2. Correlation of PD-L1 transcript with pSTAT3-GS score (A) and expression patterns in TCGA Provisional database. Expression patterns of PD-L1 transcript (B), pYSTAT3-GS score (C) and STAT3 transcript (D) in triple-negative (TN) versus non-TN early breast cancer patients in TCGA Wilcoxon–Mann–Whitney test and Spearman’s rank correlation coefficient were used (* $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$).

Figure S3. Expression of pSTAT3 protein in breast cancer patients. Immunohistochemical staining for pSTAT3 (Y705) protein was performed in a subset of patients ($n = 83$). Representative photos of A. high pSTAT3 protein expression in tumor cells and B. no pSTAT3 protein expression on whole tissue sections of FFPE breast cancer patient tumors. Original magnification: $\times 400$.

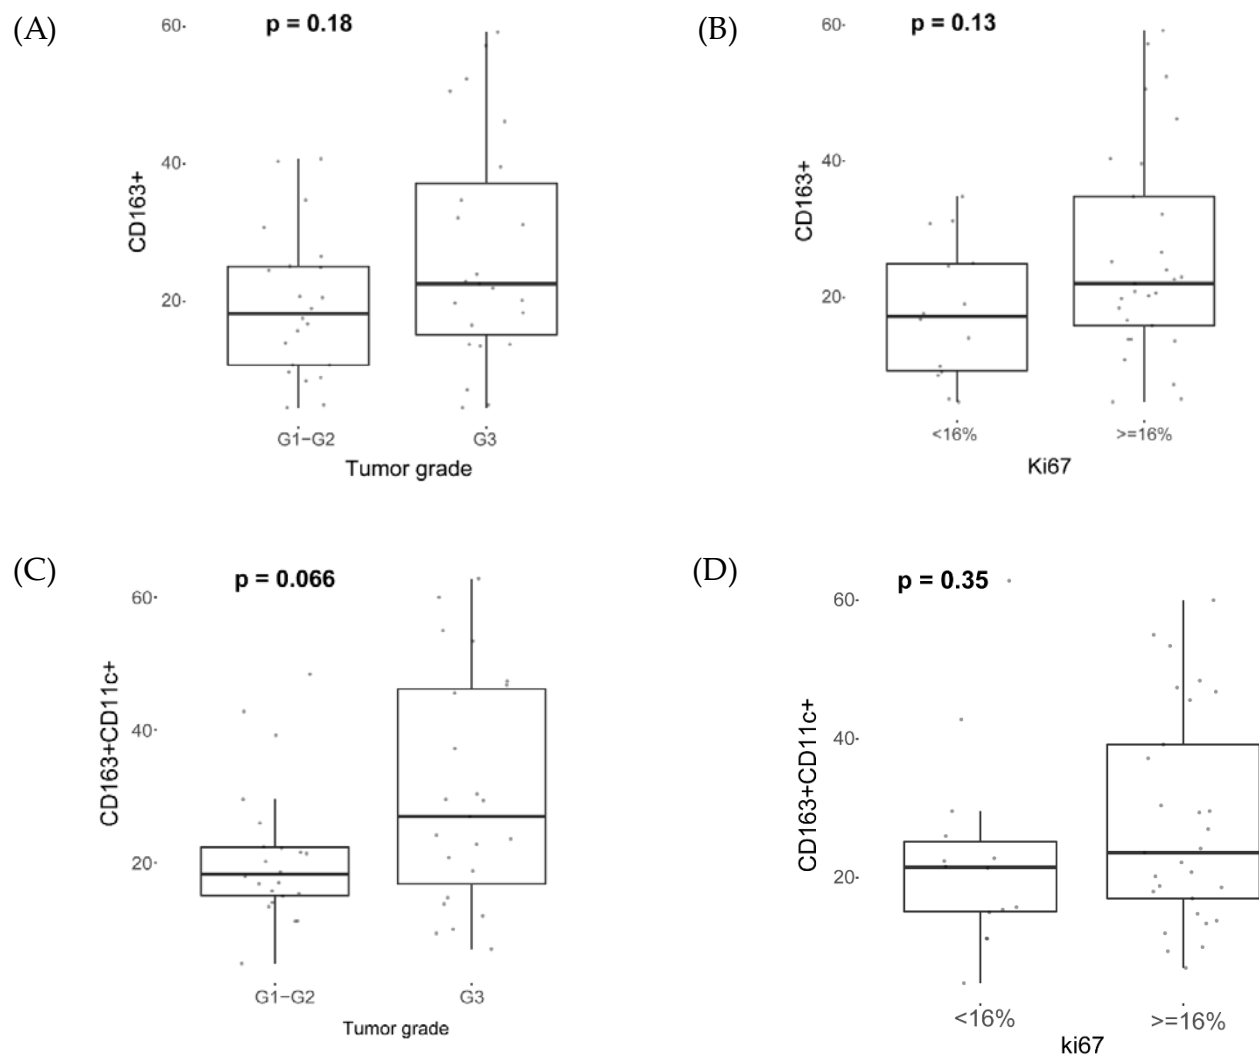

Figure S4. Correlations of CD163+ cell percentage (A,B) and CD163+ CD11c+ cell percentage (C,D) with tumor grade and proliferation status (Ki67) in human breast cancer patients. Wilcoxon–Mann–Whitney test was used (* $p < 0.05$; ** $p < 0.01$; *** $p < 0.001$).
