\* A total of 18 donors were evaluated for each variant.

† Arrows used to indicate direction of difference from reference: -, no significant difference; ↓ or ↑, <2 fold difference from A/A1 reference; ↓↓ or ↑↑, 2-4 fold difference from A/A1 reference; ↓↓↓ or ↑↑↑, >4 fold difference from A/A1 reference. Note the thresholds for a 2-fold increase or decrease compared to the A/A1 reference are 2.0 and 0.5, respectively, and that of a 4-fold increase or decrease compared to the A/A1 reference are 4.0 and 0.25, respectively.
