13 **Figure S1.** Distribution of ZO-1 and CL-7 in Caco-2/HT29-MTX monolayers. Reconstructions were performed
 14 from z-stacks of digital images (minimum 40 confocal sections, z-axis acquisition interval of 0.38 µm) taken
 15 during the experiment shown in Figure 3. The images were processed with the Axiovision module inside 4D
 16 release 4.5 (Carl Zeiss, Jena, Germany), applying the transparency algorithm. See the legend to Figure 3 for
 17 further information. Claudin-7, red; ZO-1, green.
