

**Figure S8. Neutralization of rVSV-CHIKV by CHIKV mAbs.** (A) Neutralization curve of rVSV-CHIKV by chCHK-152<sup>pMAZ</sup>. A representative dataset from three independent experiments each performed in triplicate is shown. Points represent mean  $\pm$  SD. (B) Images of infected cells at low and high concentrations of DC2.271B, DC2.429, DC1.7, and DC2.315. Quantification of infected cells at several concentrations led to the neutralization curves shown in **Figs. 4B** and **5B**
