

Robo1^{-/-},2^{-/-}

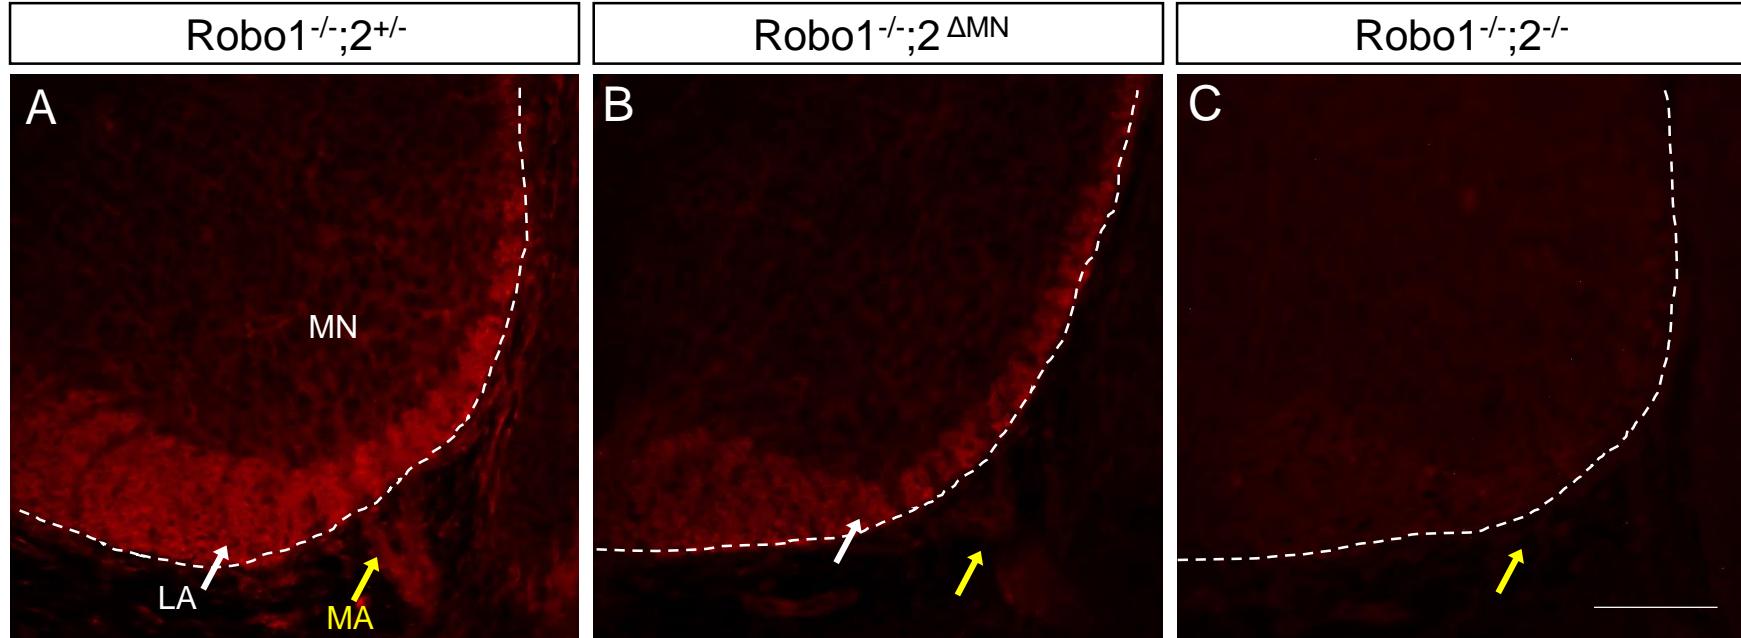

Suppl. Fig. 1. HB9+ motor neurons migrate outside the spinal cord in Robo1/2 mutants.

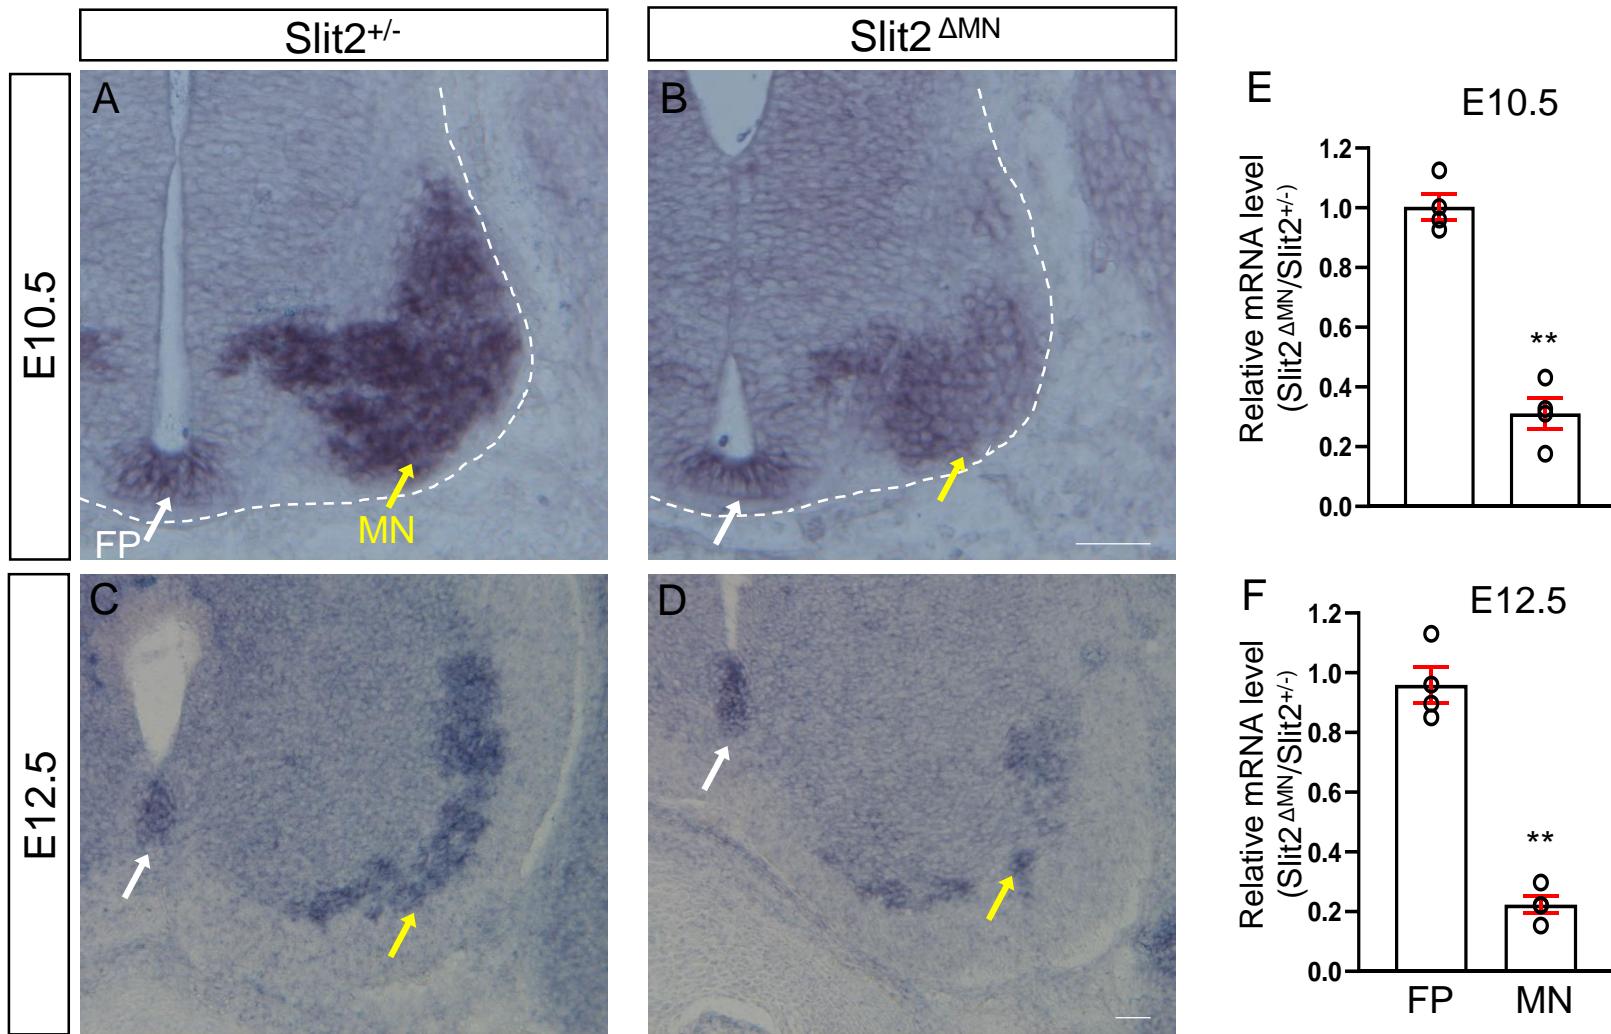

Suppl. Fig. 2. Krox20⁺ BC cell clusters are present at motor exit points in E11 wild-type and Robo1/2 double mutant spinal cords.

anti-Robo2 antibody

Suppl. Fig. 3. Robo2 antibody labeling is depleted by spinal motor neurons and motor axons in motor neuron-specific Robo2 knockout spinal cords.

Suppl. Fig. 4. Slit2 exon8 transcript is reduced by spinal motor neurons in motor neuron-specific Slit2 knockout spinal cords.
