

3 Selection of patients and participants from Primary Care data - READ codes

3.1 Primary care

For primary care data, READ codes were used to identify conditions matching the trial indications. READ codes are shown in Table S3.1. There are 50 rows in the cars dataframe.

For migraine and for thromboembolism, primary care patients were only identified as having the indication if they were also taking anti-migraine medication (ATC code N02C) or anticoagulants (ATC code B01AA, B01AE or B01AF), respectively. These codes are shown under comorbidity definitions in the next section.
