## Supplementary Table 1. The PRISMA checklist.

Section/topic	#	Checklist item					
TITLE	·						
Title	1	Identify the report as a systematic review, meta-analysis, or both.					
ABSTRACT							
Structured summary	2	rovide a structured summary including, as applicable: background; objectives; data sources; study eligibility criteria, articipants, and interventions; study appraisal and synthesis methods; results; limitations; conclusions and implications of ey findings; systematic review registration number.					
INTRODUCTION							
Rationale	3 Describe the rationale for the review in the context of what is already known.						
Objectives	4	Provide an explicit statement of questions being addressed with reference to participants, interventions, comparisons, outcomes, and study design (PICOS).					
METHODS							
Protocol and registration	5	5 Indicate if a review protocol exists, if and where it can be accessed (e.g., Web address), and, if available, provide registration information including registration number.					
Eligibility criteria	teria 6 Specify study characteristics (e.g., PICOS, length of follow-up) and report characteristics (e.g., years considered, language, publication status) used as criteria for eligibility, giving rationale.						
Information sources	7	Describe all information sources (e.g., databases with dates of coverage, contact with study authors to identify additional studies) in the search and date last searched.					
Search	8	Present full electronic search strategy for at least one database, including any limits used, such that it could be repeated.					
Study selection	9	9 State the process for selecting studies (i.e., screening, eligibility, included in systematic review, and, if applicable, included in the meta-analysis).					

Data collection process	10	Describe method of data extraction from reports (e.g., piloted forms, independently, in duplicate) and any processes for obtaining and confirming data from investigators.				
Data items	11	List and define all variables for which data were sought (e.g., PICOS, funding sources) and any assumptions and simplifications made.	5			
Risk of bias in individual studies	12	Describe methods used for assessing risk of bias of individual studies (including specification of whether this was done at the study or outcome level), and how this information is to be used in any data synthesis.	6			
Summary measures	13	State the principal summary measures (e.g., risk ratio, difference in means).	6			
Synthesis of results	14	Describe the methods of handling data and combining results of studies, if done, including measures of consistency (e.g., I²) for each meta-analysis.	6			

## Page 1 of 2

Section/topic	#	Checklist item						
Risk of bias across studies	15	Specify any assessment of risk of bias that may affect the cumulative evidence (e.g., publication bias, selective reporting within studies).	6					
Additional analyses	16	ribe methods of additional analyses (e.g., sensitivity or subgroup analyses, meta-regression), if done, indicating which pre-specified.						
RESULTS								
Study selection	17	Give numbers of studies screened, assessed for eligibility, and included in the review, with reasons for exclusions at each stage, ideally with a flow diagram.	Figure 1					
Study characteristics	18	For each study, present characteristics for which data were extracted (e.g., study size, PICOS, follow-up period) and provide the citations.						
Risk of bias within studies	19	Present data on risk of bias of each study and, if available, any outcome level assessment (see item 12).	7					
Results of individual studies	20	For all outcomes considered (benefits or harms), present, for each study: (a) simple summary data for each intervention group (b) effect estimates and confidence intervals, ideally with a forest plot.						

Synthesis of results	21	Present results of each meta-analysis done, including confidence intervals and measures of consistency.					
			Figure 2				
Risk of bias across studies	22	Present results of any assessment of risk of bias across studies (see Item 15).					
Additional analysis	23 Give results of additional analyses, if done (e.g., sensitivity or subgroup analyses, meta-regression [see Item 16]).						
DISCUSSION							
Summary of evidence	24	Summarize the main findings including the strength of evidence for each main outcome; consider their relevance to key groups (e.g., healthcare providers, users, and policy makers).					
Limitations	25	Discuss limitations at study and outcome level (e.g., risk of bias), and at review-level (e.g., incomplete retrieval of identified research, reporting bias).					
Conclusions	26	Provide a general interpretation of the results in the context of other evidence, and implications for future research.					
FUNDING	•						
Funding	ding  Describe sources of funding for the systematic review and other support (e.g., supply of data); role of funders for the systematic review.						

From: Moher D, Liberati A, Tetzlaff J, Altman DG, The PRISMA Group (2009). Preferred Reporting Items for Systematic Reviews and Meta-Analyses: The PRISMA Statement. PLoS Med 6(6): e1000097. doi:10.1371/journal.pmed1000097

Supplementary Table 2. Quality assessment of analyzed randomized controlled trials in this meta-analysis.

First author (year)	Question 1	Question 2	Question 3	Question 4	Question 5	Question 6	Question 7	Total score
Daksha P Trivedi (2003)	Yes	No	No	Yes	Yes	No	No	3
Jean Wactawski-Wende (2006)	Yes	Yes	No	Yes	Yes	No	Yes	5
Joan M Lappe (2007)	Yes	Yes	No	Yes	Yes	No	Yes	5
Alison Avenell (2012)	Yes	Yes	No	Yes	Yes	No	No	4
John A. Baron (2015)	Yes	Yes	No	Yes	Yes	No	Yes	5
Hans-Christian Pommergaard (2015)	Yes	Yes	No	Yes	Yes	No	Yes	5
Joan M Lappe (2017)	Yes	Yes	No	Yes	Yes	No	Yes	5
Tadashi Akiba (2018)	Yes	Yes	No	Yes	Yes	No	Yes	5
Robert Scragg (2018)	Yes	Yes	No	Yes	Yes	No	Yes	5
JoAnn E. Manson (2018)	Yes	Yes	No	Yes	Yes	No	No	4

The modified Jadad scoring system for randomized controlled trials (from Crowther M et al. Blood. 2010; 116:3140-3146):

Question 1. Was the study described as randomized? If yes, score 1 point. Question 2. If yes to question 1, was an appropriate randomization sequence described and used (eg, table of random numbers, computer generated, etc.)? If yes, score 1 point. Question 3. If yes to question 1, was an inappropriate method to generate the sequence of randomization used (patients were allocated alternately, or according to date of birth, hospital number, etc.)? If yes, subtract 1 point. Question 4. Was the study described as double blinded? If yes, score 1 point. Question 5. If yes to question 4, was an appropriate method of blinding used (eg, identical placebo, active placebo, dummy, etc.)? If yes, score 1 point. Question 6. If yes to question 4, was an inappropriate method for blinding used (eg, comparison of tablet vs injection with no double dummy)? If yes, subtract 1 point. Question 7. Were the withdrawals and dropouts described? If yes, score 1 point.
