

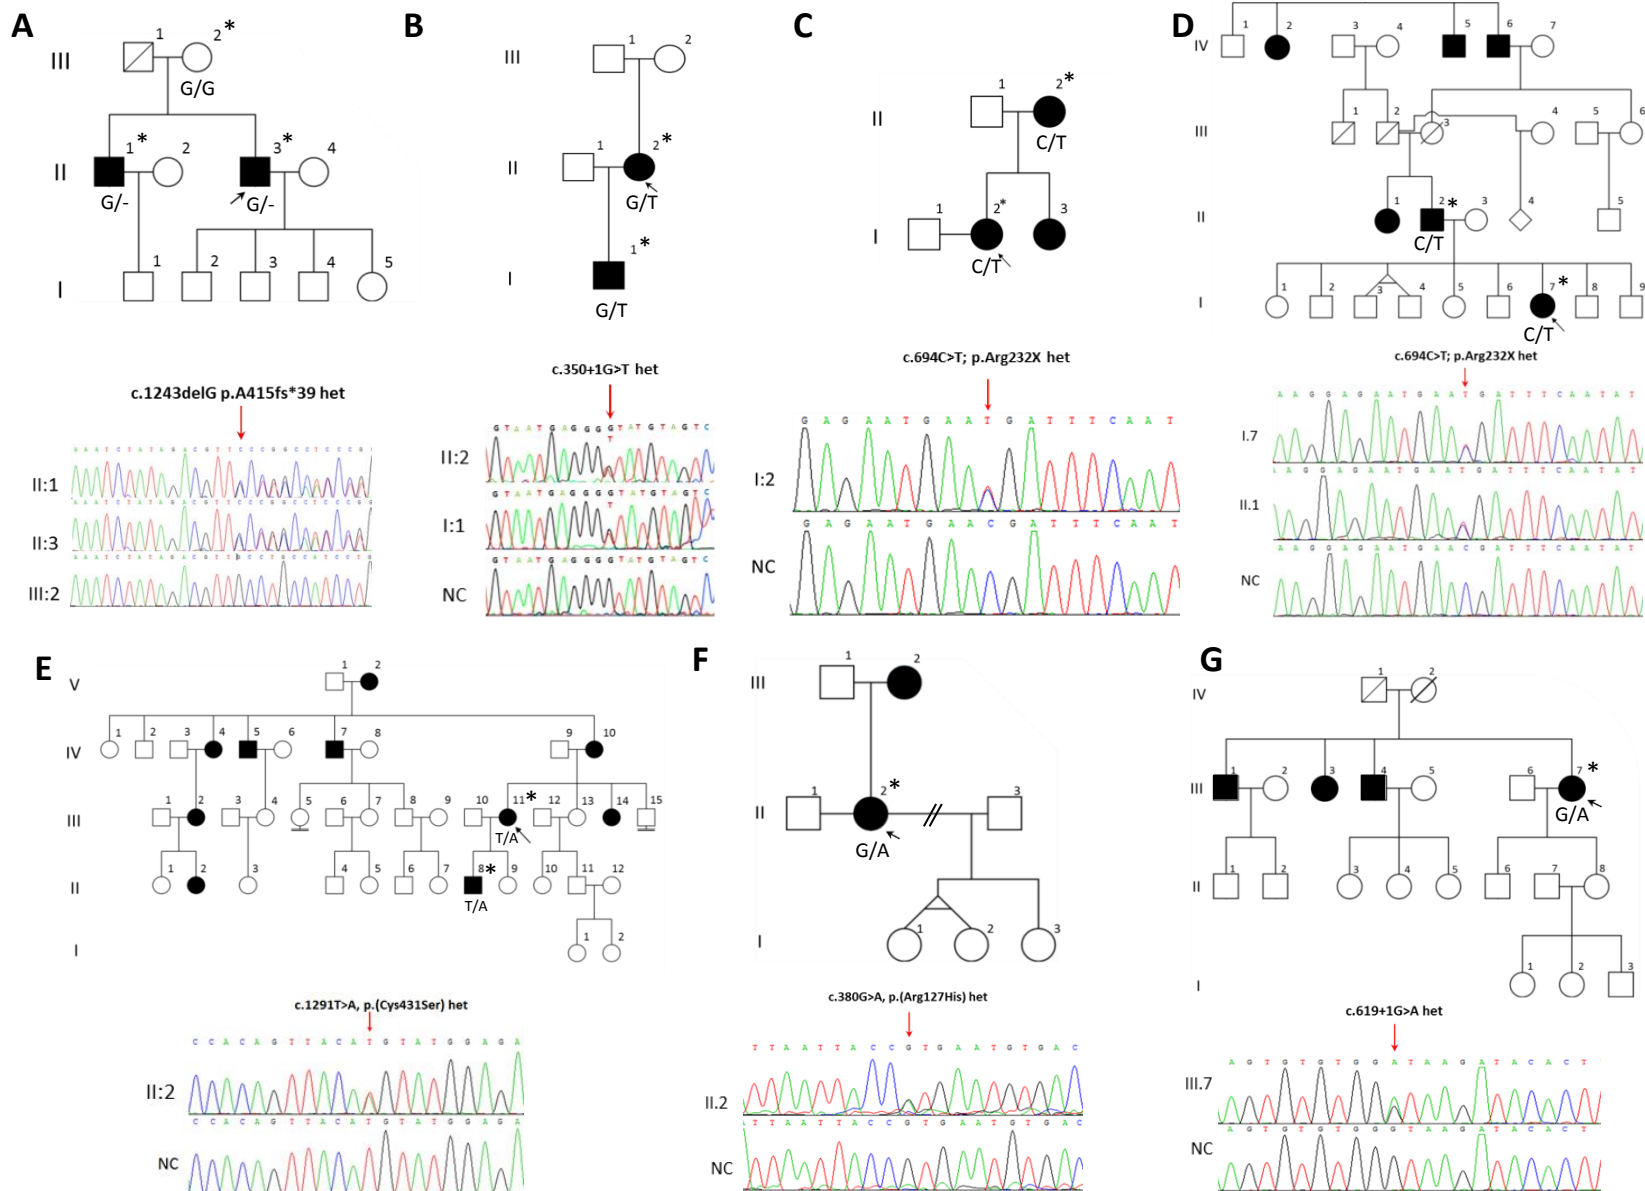

Figure 1

Pedigrees and Sanger sequencing chromatograms of identified CFH variants (Families A-G): Pedigrees detailing family history of early onset macular generation in each case alongside corresponding sequencing chromatogram indicating the identified *CFH* mutation (indicated by red arrow). Letters indicate family identifier; black squares/circles indicate affected family members; white squares/circles indicate unaffected family members; asterisks (*) indicate individuals with DNA available and in whom the *CFH* mutation was confirmed as present. Genetic status is indicated underneath the symbol for each individual tested.
