Ecological, evolutionary & environmental sciences

## Life sciences study design

All studies must disclose on these points even when the disclosure is negative.

Sample size

Describe how sample size was determined, detailing any statistical methods used to predetermine sample size OR if no sample-size calculation was performed, describe how sample sizes were chosen and provide a rationale for why these sample sizes are sufficient.

Data exclusions

Describe any data exclusions. If no data were excluded from the analyses, state so OR if data were excluded, describe the exclusions and the rationale behind them, indicating whether exclusion criteria were pre-established.

Replication

Describe the measures taken to verify the reproducibility of the experimental findings. If all attempts at replication were successful, confirm this OR if there are any findings that were not replicated or cannot be reproduced, note this and describe why.

Randomization

Describe how samples/organisms/participants were allocated into experimental groups. If allocation was not random, describe how covariates were controlled OR if this is not relevant to your study, explain why.

Blinding

Describe whether the investigators were blinded to group allocation during data collection and/or analysis. If blinding was not possible, describe why OR explain why blinding was not relevant to your study.

## Behavioural & social sciences study design

All studies must disclose on these points even when the disclosure is negative.

Study description

Briefly describe the study type including whether data are quantitative, qualitative, or mixed-methods (e.g. qualitative cross-sectional, quantitative experimental, mixed-methods case study).

Research sample

State the research sample (e.g. Harvard university undergraduates, villagers in rural India) and provide relevant demographic information (e.g. age, sex) and indicate whether the sample is representative. Provide a rationale for the study sample chosen. For studies involving existing datasets, please describe the dataset and source.

Sampling strategy

Describe the sampling procedure (e.g. random, snowball, stratified, convenience). Describe the statistical methods that were used to predetermine sample size OR if no sample-size calculation was performed, describe how sample sizes were chosen and provide a rationale for why these sample sizes are sufficient. For qualitative data, please indicate whether data saturation was considered, and what criteria were used to decide that no further sampling was needed.

Data collection

Provide details about the data collection procedure, including the instruments or devices used to record the data (e.g. pen and paper, computer, eye tracker, video or audio equipment) whether anyone was present besides the participant(s) and the researcher, and whether the researcher was blind to experimental condition and/or the study hypothesis during data collection.

Timing

Indicate the start and stop dates of data collection. If there is a gap between collection periods, state the dates for each sample cohort.

Data exclusions

If no data were excluded from the analyses, state so OR if data were excluded, provide the exact number of exclusions and the rationale behind them, indicating whether exclusion criteria were pre-established.

Non-participation

State how many participants dropped out/declined participation and the reason(s) given OR provide response rate OR state that no participants dropped out/declined participation.

Randomization

If participants were not allocated into experimental groups, state so OR describe how participants were allocated to groups, and if allocation was not random, describe how covariates were controlled.

## Ecological, evolutionary & environmental sciences study design

All studies must disclose on these points even when the disclosure is negative.

Study description

Briefly describe the study. For quantitative data include treatment factors and interactions, design structure (e.g. factorial, nested, hierarchical), nature and number of experimental units and replicates.

Research sample

Describe the research sample (e.g. a group of tagged Passer domesticus, all Stenocereus thurberi within Organ Pipe Cactus National Monument), and provide a rationale for the sample choice. When relevant, describe the organism taxa, source, sex, age range and any manipulations. State what population the sample is meant to represent when applicable. For studies involving existing datasets, describe the data and its source.

Sampling strategy

Note the sampling procedure. Describe the statistical methods that were used to predetermine sample size OR if no sample-size calculation was performed, describe how sample sizes were chosen and provide a rationale for why these sample sizes are sufficient.

| Data collection                          | Describe the data collection procedure, including who recorded the data and how.  |  |  |  |
|--|---|--|--|--|
| Timing and spatial scale                 | Indicate the start and stop dates of data collection, noting the frequency and periodicity of sampling and providing a rationale for these choices. If there is a gap between collection periods, state the dates for each sample cohort. Specify the spatial scale from which the data are taken                               |  |  |  |
| Data exclusions                          | If no data were excluded from the analyses, state so OR if data were excluded, describe the exclusions and the rationale behind them, indicating whether exclusion criteria were pre-established.   |  |  |  |
| Reproducibility                          | Describe the measures taken to verify the reproducibility of experimental findings. For each experiment, note whether any attempts to repeat the experiment failed OR state that all attempts to repeat the experiment were successful.   |  |  |  |
| Randomization                            | Describe how samples/organisms/participants were allocated into groups. If allocation was not random, describe how covariates were controlled. If this is not relevant to your study, explain why.  |  |  |  |
| Blinding                                 | Describe the extent of blinding used during data acquisition and analysis. If blinding was not possible, describe why OR explain why blinding was not relevant to your study.   |  |  |  |
| Did the study involve field work, collec | tion and transport  |  |  |  |
| Field conditions                         | Describe the study conditions for field work, providing relevant parameters (e.g. temperature, rainfall).   |  |  |  |
| Location                                 | State the location of the sampling or experiment, providing relevant parameters (e.g. latitude and longitude, elevation, water depth). Charlotte Maxeke Johannesburg Academic Hospital and Morningside Mediclinic   |  |  |  |
| Access and import/expor                  | Describe the efforts you have made to access habitats and to collect and import/export your samples in a responsible manner and in compliance with local, natio tubes and in a cooler bags, noting any permits that were obtained (give the name of the issuing authority, the date of issue, and any identifying information). |  |  |  |
| Disturbance                              | Describe any disturbance <b>N/A</b> :ed by the study and how it was minimized.  |  |  |  |

# Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

| Materials & experimental systems |                               |          | Methods                |  |  |

| <b>✓</b>                         | Clinical data                 |          |                        |  |  |

#### **Antibodies**

Validation

Antibodies used

Describe all antibodies used in the study; as applicable, provide supplier name, catalog number, clone name, and lot number.

Describe the validation of each primary antibody for the species and application, noting any validation statements on the manufacturer's website, relevant citations, antibody profiles in online databases, or data provided in the manuscript.

## Eukaryotic cell lines

Policy information about <u>cell lines</u>

Cell line source(s)

State the source of each cell line used.

Authentication Describe the authentication procedures for each cell line used OR declare that none of the cell lines used were authenticated.

Mycoplasma contamination

Confirm that all cell lines tested negative for mycoplasma contamination OR describe the results of the testing for mycoplasma contamination OR declare that the cell lines were not tested for mycoplasma contamination.

#### Palaeontology

Specimen provenance

Provide provenance information for specimens and describe permits that were obtained for the work (including the name of the issuing authority, the date of issue, and any identifying information).

Specimen deposition

Indicate where the specimens have been deposited to permit free access by other researchers.

Dating methods

If new dates are provided, describe how they were obtained (e.g. collection, storage, sample pretreatment and measurement), where they were obtained (i.e. lab name), the calibration program and the protocol for quality assurance OR state that no new dates are provided.

Tick this box to confirm that the raw and calibrated dates are available in the paper or in Supplementary Information.

#### Animals and other organisms

Policy information about studies involving animals; ARRIVE guidelines recommended for reporting animal research

Laboratory animals

For laboratory animals, report species, strain, sex and age OR state that the study did not involve laboratory animals.

Wild animals

Provide details on animals observed in or captured in the field; report species, sex and age where possible. Describe how animals were caught and transported and what happened to captive animals after the study (if killed, explain why and describe method; if released, say where and when) OR state that the study did not involve wild animals.

Field-collected samples

For laboratory work with field-collected samples, describe all relevant parameters such as housing, maintenance, temperature, photoperiod and end-of-experiment protocol OR state that the study did not involve samples collected from the field.

Ethics oversight

Identify the organization(s) that approved or provided guidance on the study protocol, OR state that no ethical approval or guidance was required and explain why not.

Note that full information on the approval of the study protocol must also be provided in the manuscript.

#### Human research participants

Policy information about studies involving human research participants

Population characteristics

Describe the covariate-relevant population characteristics of the human research participants (e.g. age, gender, genotypic information, past and current diagnosis and treatment categories). If you filled out the behavioural & social sciences study design questions and have nothing to ad Children with biopsy proven FSGS, younger than 18 years

Recruitment

Des Participants were recruited based on inclusion and exclusion criteria. Only children with biopsy proven FSGS, younger than 18 the years at diagnosis, self-reported black African ethnicity, adequate data in their clinical files and accessible for participation were included. Children with HIV-associated glomerular disease on biopsy were excluded.

Ethics oversight

Identify the organization(s) thuman Research Ethics Committee (HREC (Medical)) (Approval code: M170657)

Note that full information on the approval of the study protocol must also be provided in the manuscript.

#### Clinical data

Policy information about clinical studies

All manuscripts should comply with the ICMJE guidelines for publication of clinical research and a completed CONSORT checklist must be included with all submissions.

Clinical trial registration

Provide the trial registration number from ClinicalTrials.gov or an equivalent agency.

Study protocol

Note where the full trial protocol can be accessed OR if not available, explain why.

Data collection

Describe the settings and locales of data collection, noting the time periods of recruitment and data collection.

Outcomes Describe how you pre-defined primary and secondary outcome measures and how you assessed these measures.

#### ChIP-seq

#### Data deposition

|   | Confirm that both | raw and fina | I processed data | have been | deposited in a | public database | such as GEO. |
|---|-------------------|--------------|------------------|-----------|----------------|-----------------|--------------|
| _ |                   |              | •                |           |                | •               |              |

| Confirm that you | have deposited of | or provided | access to graph files | (e.g. BED fil | es) for the ca | lled peaks. |

|                  |                   |             |                       |               |                |             |

| Data access links<br>May remain private before publication                                      | For "Initial submission" or "Revised version" documents, provide reviewer access links. For your "Final submission" document, provide a link to the deposited data.  |  |  |
|---|--|--|--|
| illes in database submission (Provide a list of all files available in the database submission. |  |  |  |
| Genome browser session (e.g. <u>UCSC</u> )  | Provide a link to an anonymized genome browser session for "Initial submission" and "Revised version" documents only, to enable peer review. Write "no longer applicable" for "Final submission" documents.                                    |  |  |
| Methodology   |  |  |  |
| Replicates  | Describe the experimental replicates, specifying number, type and replicate agreement.   |  |  |
| Sequencing depth  | Describe the sequencing depth for each experiment, providing the total number of reads, uniquely mapped reads, length of reads and whether they were paired- or single-end.  |  |  |
| Antibodies  | Describe the antibodies used for the ChIP-seq experiments; as applicable, provide supplier name, catalog number, clone name, and lot number.   |  |  |
| Peak calling parameters   | Specify the command line program and parameters used for read mapping and peak calling, including the ChIP, control and index files used.  |  |  |
| Data quality  | Describe the methods used to ensure data quality in full detail, including how many peaks are at FDR 5% and above 5-fold enrichment.   |  |  |
| Software  | Describe the software used to collect and analyze the ChIP-seq data. For custom code that has been deposited into a community repository, provide accession details.   |  |  |
| Flow Cytometry Plots  |  |  |  |
| Confirm that:   |  |  |  |
|   | narker and fluorochrome used (e.g. CD4-FITC).  visible. Include numbers along axes only for bottom left plot of group (a 'group' is an analysis of identical markers).   |  |  |
|   | s with outliers or pseudocolor plots.  |  |  |
|   | nber of cells or percentage (with statistics) is provided.   |  |  |
| —<br>Methodology  |  |  |  |
| Sample preparation  | Describe the sample preparation, detailing the biological source of the cells and any tissue processing steps used.  |  |  |
| Instrument  | Identify the instrument used for data collection, specifying make and model number.  |  |  |
| Software  | Describe the software used to collect and analyze the flow cytometry data. For custom code that has been deposited into a community repository, provide accession details.   |  |  |
| Cell population abundance   | Describe the abundance of the relevant cell populations within post-sort fractions, providing details on the purity of the samples and how it was determined.  |  |  |
| Gating strategy   | Describe the gating strategy used for all relevant experiments, specifying the preliminary FSC/SSC gates of the starting cell population, indicating where boundaries between "positive" and "negative" staining cell populations are defined. |  |  |
| Tick this box to confirm the  | nat a figure exemplifying the gating strategy is provided in the Supplementary Information.  |  |  |
|   |  |  |  |

### Magnetic resonance imaging

#### Experimental design

Design type Indicate task or resting state; event-related or block design.

Specify the number of blocks, trials or experimental units per session and/or subject, and specify the length of each trial Design specifications or block (if trials are blocked) and interval between trials.

Behavioral performance measures State number and/or type of variables recorded (e.g. correct button press, response time) and what statistics were used to establish that the subjects were performing the task as expected (e.g. mean, range, and/or standard deviation across subjects).

| Acquisition  |   |  |  |  |  |  |
|--|---|--|--|--|--|--|
| Imaging type(s)  | Specify: functional, structural, diffusion, perfusion.  |  |  |  |  |  |
| Field strength   | Specify in Tesla  |  |  |  |  |  |
| Sequence & imaging parameters  | Specify the pulse sequence type (gradient echo, spin echo, etc.), imaging type (EPI, spiral, etc.), field of view, matrix size, slice thickness, orientation and TE/TR/flip angle.  |  |  |  |  |  |
| Area of acquisition  | State whether a whole brain scan was used OR define the area of acquisition, describing how the region was determined.  |  |  |  |  |  |
| Diffusion MRI Used   | ☐ Not used  |  |  |  |  |  |
| Parameters Specify # of  | f directions, b-values, whether single shell or multi-shell, and if cardiac gating was used.  |  |  |  |  |  |
| Preprocessing  |   |  |  |  |  |  |
| Preprocessing software   | Provide detail on software version and revision number and on specific parameters (model/functions, brain extraction, segmentation, smoothing kernel size, etc.).   |  |  |  |  |  |
| Normalization  | If data were normalized/standardized, describe the approach(es): specify linear or non-linear and define image types used for transformation OR indicate that data were not normalized and explain rationale for lack of normalization. |  |  |  |  |  |
| Normalization template   | Describe the template used for normalization/transformation, specifying subject space or group standardized space (e.g. original Talairach, MNI305, ICBM152) OR indicate that the data were not normalized.                             |  |  |  |  |  |
| Noise and artifact removal   | Describe your procedure(s) for artifact and structured noise removal, specifying motion parameters, tissue signals and physiological signals (heart rate, respiration).   |  |  |  |  |  |
| Volume censoring   | Define your software and/or method and criteria for volume censoring, and state the extent of such censoring.   |  |  |  |  |  |
| Statistical modeling & inference   | e   |  |  |  |  |  |
| Model type and settings  | Specify type (mass univariate, multivariate, RSA, predictive, etc.) and describe essential details of the model at the first and second levels (e.g. fixed, random or mixed effects; drift or auto-correlation).                        |  |  |  |  |  |
| Effect(s) tested   | Define precise effect in terms of the task or stimulus conditions instead of psychological concepts and indicate whether ANOVA or factorial designs were used.  |  |  |  |  |  |
| Specify type of analysis: Whole  | e brain ROI-based Both  |  |  |  |  |  |
| Anatomi  | cal location(s) Describe how anatomical locations were determined (e.g. specify whether automated labeling algorithms or probabilistic atlases were used).  |  |  |  |  |  |
| Statistic type for inference (See <u>Eklund et al. 2016</u> )  | Specify voxel-wise or cluster-wise and report all relevant parameters for cluster-wise methods.   |  |  |  |  |  |
| Correction   | Describe the type of correction and how it is obtained for multiple comparisons (e.g. FWE, FDR, permutation or Monte Carlo).  |  |  |  |  |  |
| Models & analysis  |   |  |  |  |  |  |
| n/a Involved in the study  Functional and/or effective co  Graph analysis  Multivariate modeling or pred |   |  |  |  |  |  |
| Functional and/or effective connect  | Report the measures of dependence used and the model details (e.g. Pearson correlation, partial correlation, mutual information).   |  |  |  |  |  |
| Graph analysis   | Report the dependent variable and connectivity measure, specifying weighted graph or binarized graph, subject- or group-level, and the global and/or node summaries used (e.g. clustering coefficient, efficiency, etc.).               |  |  |  |  |  |

Multivariate modeling and predictive analysis

Specify independent variables, features extraction and dimension reduction, model, training and evaluation metrics.
