

Figure S2. The effect of 4EGI-1 on mRNA stability. (A) DMSO treatment does not substantially affect mRNA stability. Shown are scatterplots comparing half-lives for endogenous genes (averaged from both pools) from the original experiment and DMSO-treated cells. Red dashed line represents $x = y$. (B) 4EGI-1 treatment affects mRNA stability. As in A, except comparing half-lives from the original experiment and 4EGI-1-treated cells.
