Experimental Procedures

General procedure for synthesis of benzoyl chlorides

This has been previously described.¹

General procedure for synthesis of heteroaryl acyl chlorides

The carboxylic acid (1.0 equiv) was dissolved in thionyl chloride (25.0 equiv), and the mixture was heated to reflux for 2.5 h. The excess thionyl chloride was removed *in vacuo*, and the resulting solid was used without further purification.

General procedure for synthesis of diphenyl ethers, Method A (nucleophilic aromatic substitution)

A 4-fluorobenzonitrile derivative (1.0 equiv.), a phenol derivative (1.0 equiv.), and K₂CO₃ (2.0 equiv.) were dissolved in either DMSO or DMF, and the mixture was stirred at 100 °C for 16 h. The mixture was cooled to room temperature and was diluted with water (2x volume of DMSO or DMF used), then it was extracted with ethyl acetate (3x). The combined organic layer was washed with water (3x), then once with brine, and dried (anhydrous Na₂SO₄). After being concentrated *in vacuo*, the crude material was purified by column chromatography on silica gel.

General procedure for synthesis of diphenyl ethers, Method B (Ullmann coupling)

This has been previously described.¹

General procedure for nitro reduction using Fe/HCl

This has been previously described.¹

General procedure for nitro reduction using SnCl₂·H₂O

Using an adaptation of a literature procedure,² the starting material (1.0 equiv.) was dissolved in ethanol (6.0 mL/mmol starting material), and SnCl₂·2H₂O (5.0 equiv.) was added. The mixture was stirred at 70 °C for 4 h, then cooled to room temperature and poured onto ice. The pH was adjusted to ~7-8 with saturated NaHCO₃, and the aqueous layer was extracted 3x with ethyl

acetate. The combined organic layers were dried (anhydrous Na₂SO₄), and the solvent was removed *in vacuo*. The crude product was purified by column chromatography on silica gel.

General procedure for synthesis of *N'*-hydroxybenzimidamides

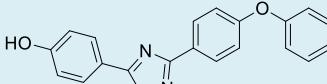

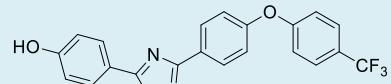

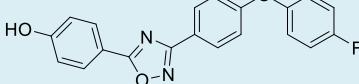

This was previously described.¹

General procedure for synthesis of allyl-protected phenols

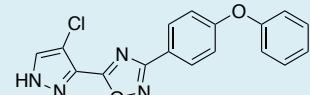

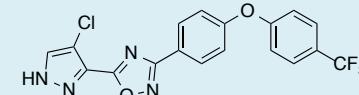

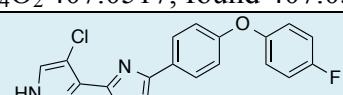

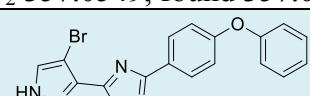

Allyl-protected phenols **9**,³ **12**,⁴ **13**,⁵ and **20**,⁶ are known compounds, and were synthesized using previously described procedures.³

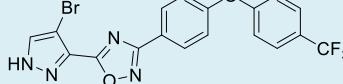

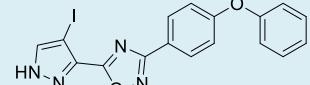

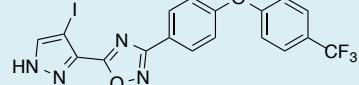

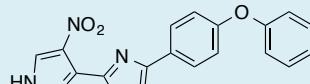

Compounds **52**, **14**, and **15** were synthesized using previously described procedures.^{1,7}
