

# The 12 Features created from a single T1

\*Asterisks denote features included in the final algorithm.

Subject specific anomalies*	Geometry*	Geometry*	Subject specific anomalies	Atlas-based	Atlas-based
					
(1) Original T1 weighted image	(2) 3 tissue k-mean segmentation	(3) Gradient magnitude	(4) Asymmetry of T1	(5) Difference from Template	(6) Neighborhood correlation with template
<pre>kmeansSegmentation(3, brainmask)\$segmentation</pre>	<pre>iMath('Grad') %&gt;% iMath('Normalize')</pre>	<pre>refl.t1=reflectImage(t1, axis=1, tx='Affine') iMath(refl.t1-t1, 'TruncateImageIntensity', 0.01, 0.99) %&gt;% iMath('Normalize')</pre>	<pre>(smoothImage(template,4) - smoothImage(t1, 4)) %&gt;% iMath('Normalize')</pre>		Custom long function

Geometry	Control-based deviation*	Control-based deviation	Control-based deviation*	Control-based deviation*	Control-based deviation
					
(7) Laplacian	(8) Deviance from controls for k-mean segmentation	(9) Deviance from controls for gradient magnitude	(10) Deviance from controls for asymmetry of T1	(11) Deviance from controls for raw T1 image	(12) Deviance from controls for template neighborhood correlation
<pre>iMath('Laplacian')</pre>	<pre>(subject - conAverage) %&gt;% iMath('Normalize')</pre>	<pre>(conAverage - subject) %&gt;% iMath('Normalize')</pre>	<pre>(subject - conAverage) %&gt;% iMath('Normalize')</pre>	<pre>subject = smoothImage(t1,2) %&gt;% iMath('TruncateImageIntensity', 0.001, 0.999) %&gt;% iMath('Normalize') (conAverage - subject) %&gt;% iMath('TruncateImageIntensity', 0.01, 0.99) %&gt;% iMath('Normalize')</pre>	Custom long function
