

Supplemental Figure 3. Frequency of antigen-specific T cells in B6 and CC042 following pulmonary Mtb infection. Representative flow plots showing the frequencies of ESAT-6-specific CD4 T cells and TB10.4-specific CD8 T cells in the (A) Lung (B) mediastinal lymph node (mLN) and (C) spleen of B6 (grey shading) and CC042 (teal shading) mice at 4 weeks post pulmonary Mtb infection. Bar plots show mean + SD of ESAT-6-specific CD4 T cells and TB10.4-specific CD8 T cells in the (D) Lung (E) mLN and (F) spleen at the same timepoint. Sidak's multiple comparison test was used to determine significance where $p < 0.05$ *, $p < 0.001$ ***.
