

Description of additional supplementary items

File name: Supplementary Movie 1

Description: Susceptible, exponential phase cells on an MHB+agarose pad supplemented with cephalixin (50 µg/ml) filament severely before lysis occurs.

File name: Supplementary Movie 2

Description: Cells isolated by cephalixin treatment and filtration remain unaffected on an MHB+agarose pad supplemented with cephalixin (50 µg/ml).

File name: Supplementary Movie 3

Description: Most cells isolated by cephalixin treatment and filtration reinitiate growth on an MHB+agarose pad.
