

Supplementary information, Fig. S2 The representative genome browser snapshot exhibits epigenetic modification and gene expression changes during mouse gastrulation.

Fig. S2 The representative genome browser snapshot exhibits epigenetic modification and gene expression changes during mouse gastrulation. a-d

Representative genome browser snapshots of representative epigenomic and transcriptomic profile at the loci of *T* (a), *Bmp4* (b), *Wnt3a* (c), and *Lhx5* (d).

Epigenomic enrichments at distinct distances from *Lhx5* TSS are indicated with various shades of red.
