

Fig. S2. Representative flow cytometry gating for cell sorting of peripheral lymph nodes

Parent gating strategy for the flow cytometric sorting of day 5 and day 27 post-ZIKV infection LN samples for analysis of cellular infection status by RT-PCR. A representative staining profile from the ZIKV cohort is shown. Live, singlet leukocytes were sorted into B cell ($CD20^+$, $CD3^-$, $CD11b^-$), T cell ($CD3^+$), or macrophage ($CD11b^+$, $CD3^-$) populations.
