

A**Binding to mouse SIRP receptor family members****B****Binding to mouse macrophages and blocking CD47 binding to mouse SIRP α** 

Additional file 4: Figure S2. Specificity of anti-mouse SIRP α antibodies.

(A) Hybridoma-purified anti-mSIRP α antibodies selectively bind mouse SIRP α transiently expressed on CHO-K1 cells without obvious cross-reactivity towards mouse SIRP β . (B) Anti-mSIRP α antibodies bind to the C57BL/6 mouse-derived peritoneal macrophage cell line IC-21 and block CD47 binding. (A, B: Mean \pm SD; representative of n = 2 is shown).
