

Reviewer 1 v.1

Comments to the Author

This is a very comprehensive review on an important clinical topic.

The ms is well written and well referenced.

I agree with all statements and analyses.

Three practical points to add:

1. Is there an advantage of once daily dosing versus twice daily?
2. What are the recommendations about breath holding? Is it similar for DPIs and pMDIs?
3. What is the recommended breathing pattern through a VHC?
