

Supporting Information

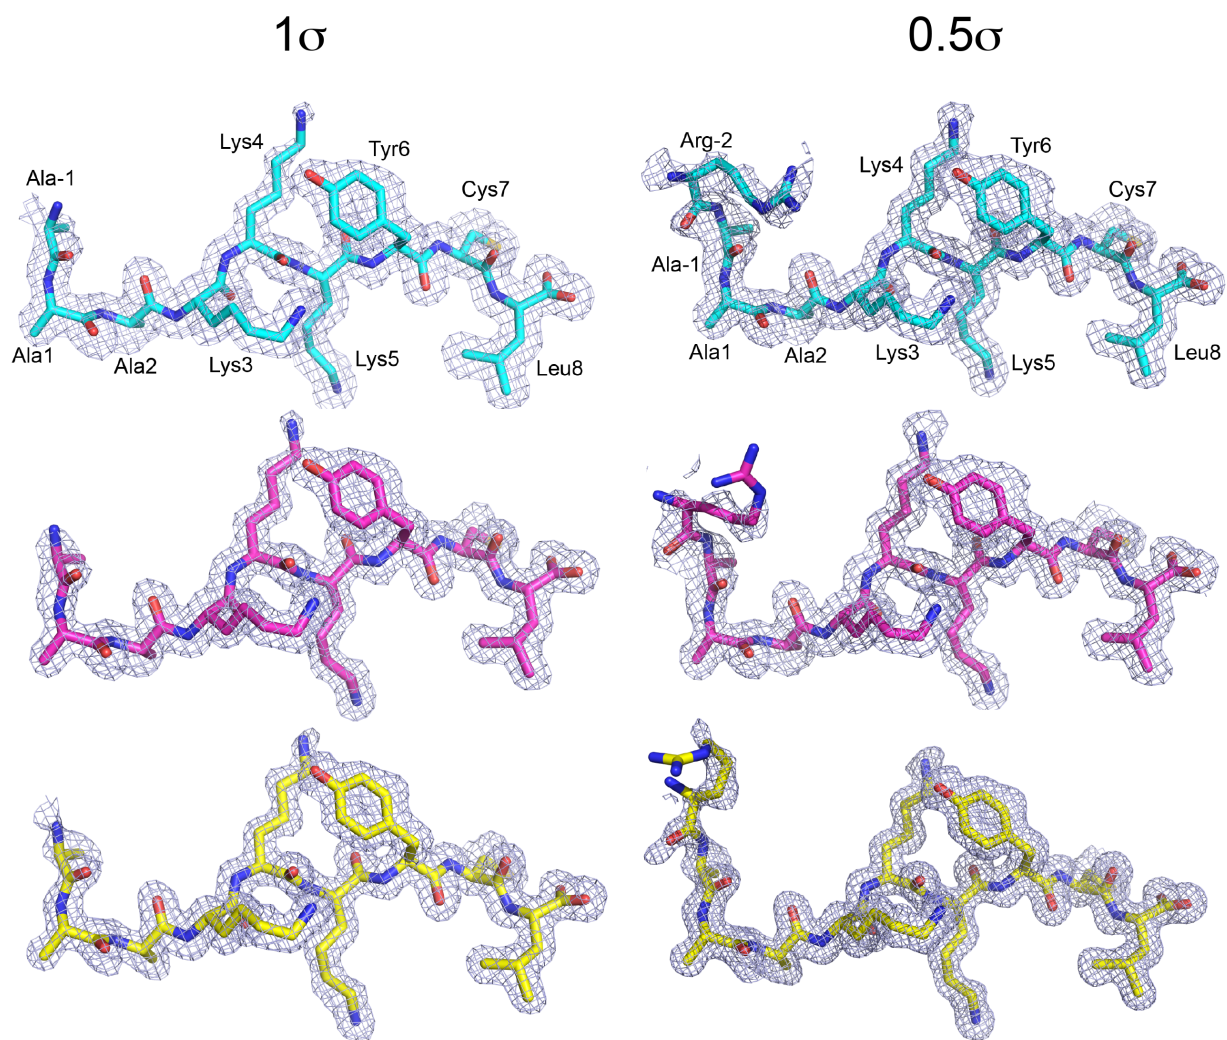

Figure S1. 2mFo-DFc electron density, contoured at 1σ (left panels) and 0.5σ (right panels), is shown as blue mesh around the 12 (cyan), 14 (magenta), and 20mer (yellow) (R(N-Me)A)(RA)_n-₁AAKKKYCL. The density for P-2 Arg is partially visible at 0.5σ; we have omitted P-2 Arg and all residue extensions beyond P-2 from our final model. Peptide residues are labelled.
