

Suppl. Fig. 1. Flow cytometry gating strategy for analysis of BAL immune cell populations. (A) Ratiometric analysis of AnxA1-induced increase in cytosolic Ca^{2+} . (B) BAL cells were gated for size and granularity by forward and side scatter (FSC and SSC), followed by a pre-gating on $CD45^+$ events. Cells in BAL fluids of IAV-infected mice obtained at indicated time points of treatment were pre-gated on $CD45^+$ events and were analyzed for the levels of AMs ($CD11c^+Siglec-F^+MHCII^{+/-}$). (C) qPCR analysis of AnxA1 mRNA levels in lung homogenates of AnxA1 or control-treated mice at day 7 p.i.
