

SUPPLEMENTAL TEXT 1: Applied equations

Standardized Uptake Values were calculated as follows*:

$$\text{SUV} = \frac{\text{ACvoi } (kBq/ml)}{\text{total tracer activity (MBq) / Body Weight (kg)}} \quad \begin{matrix} a \\ b \end{matrix}$$

^a AC, activity concentration; VOI, Volume-Of-Interest

^b Body Weight (*BW*) can be replaced by Lean Body Mass (LBM) or Body-Surface Area (BSA), for which the following formulas were used:

$$\begin{aligned} LBM &= 1.10 * \text{weight} - 128.0 * (\text{weight}/\text{height})^2 \\ BSA &= 0.007184 * \text{weight}^{0.425} * \text{height}^{0.725} \end{aligned}$$
