Sense IT continued Questionnaire 1st iteration

Total of 26 questions.

1 4		4 .	
Intr/	2411	Ctic	\n
Intro	Juu	CIIC	,,,

Scelta and the University of Twente are in the process of developing a new treatment intervention in which mobile technology is used to aid in the process of learning to better recognize emotions. To be able to achieve the best possible results, it is important to involve potential end-users in the design process. It helps in catering to the needs and requirements of future users.

As an envisioned user of such an emotion recognition intervention, you are invited to share both positive and negative points about the concept and comment on how you believe the intervention should be and look like. Be frank, there is no need to tone down any of your comments.

Use context

it like the internet and social media?
