

Figure S1: Expression levels of miR-20a-5p, miR-340-5p, and let-7i-5p in liver, spleen, lung, kidney and thymus tissues in the 8 weeks post-MI group and the sham group. There was no significant difference in the miR-20a-5p, miR-340-5p, and let-7i-5p levels in liver, spleen, lung, kidney and thymus tissues between the 8 weeks post-MI group and the sham group. MI, myocardial infarction.

Table S1: The KEGG annotation results of the 19 common target genes.
