

SUPPLEMENTARY TABLE S2. PROPORTION OF MALIGNANCIES CLASSIFIED AS LOW RISK, INTERMEDIATE RISK, OR HIGH RISK BY SONOGRAPHIC PATTERN (N [%]; TABLE OF FIG. 2C)

	<i>Low-risk cancer,</i> n=76 (61)	<i>Intermediate-risk cancer,</i> n=38 (31)	<i>High-risk cancer,</i> n=10 (8)	<i>p-Value</i>
Low/intermediate suspicion (n=45)	32 (71)	12 (27)	1 (2)	0.13
Non-ATA suspicion (n=59)	33 (56)	21 (36)	5 (8)	
High suspicion (n=20)	11 (55)	5 (25)	4 (20)	

Two intrathyroidal parathyroid carcinomas are excluded. See Methods section for definition of groups. Low and intermediate suspicion sonographic patterns were grouped for the analysis (Fisher's exact test).
