Supplementary Figure S1: *GIRK1* mRNA levels of chimeric $MCF7^{GIRK1/eYFP}$ compared to bicistronic $MCF7^{GIRK1}$ cell lines

GIRK1 mRNA levels are normalized to $MCF7^{WT}$. *WT*: $MCF7^{WT}$, *eYFP*: $MCF7^{eYFP}$, *eGFP*: $MCF7^{eGFP}$, *GIRK1*: $MCF7^{GIRK1}$ and *GIRK1^{eYFP}*: $MCF7^{GIRK1/eYFP}$. $MCF7^{eGFP}$ and $MCF7^{GIRK1}$ represent the cell lines engineered using the bicistronic pIRES2eGFP vector described here, while $MCF7^{eYFP}$ and $MCF7^{GIRK1/eYFP}$ represent the chimeric GIRK1/eYFP protein. Number of experiments is given in parenthesis above each bar. *,(**): the group differs statistically significant from $MCF7^{WT}$ $p<0.05$ (<0.001) level. ##: the group differs statistically significant from $MCF7^{eYFP}$ at the $p<0.05$ level. +++: the group differs statistically significant from $MCF7^{eGFP}$ at the $p<0.001$ level.

Supplementary Figure S2: Colony formation and growth assay performed on the different MEC lines

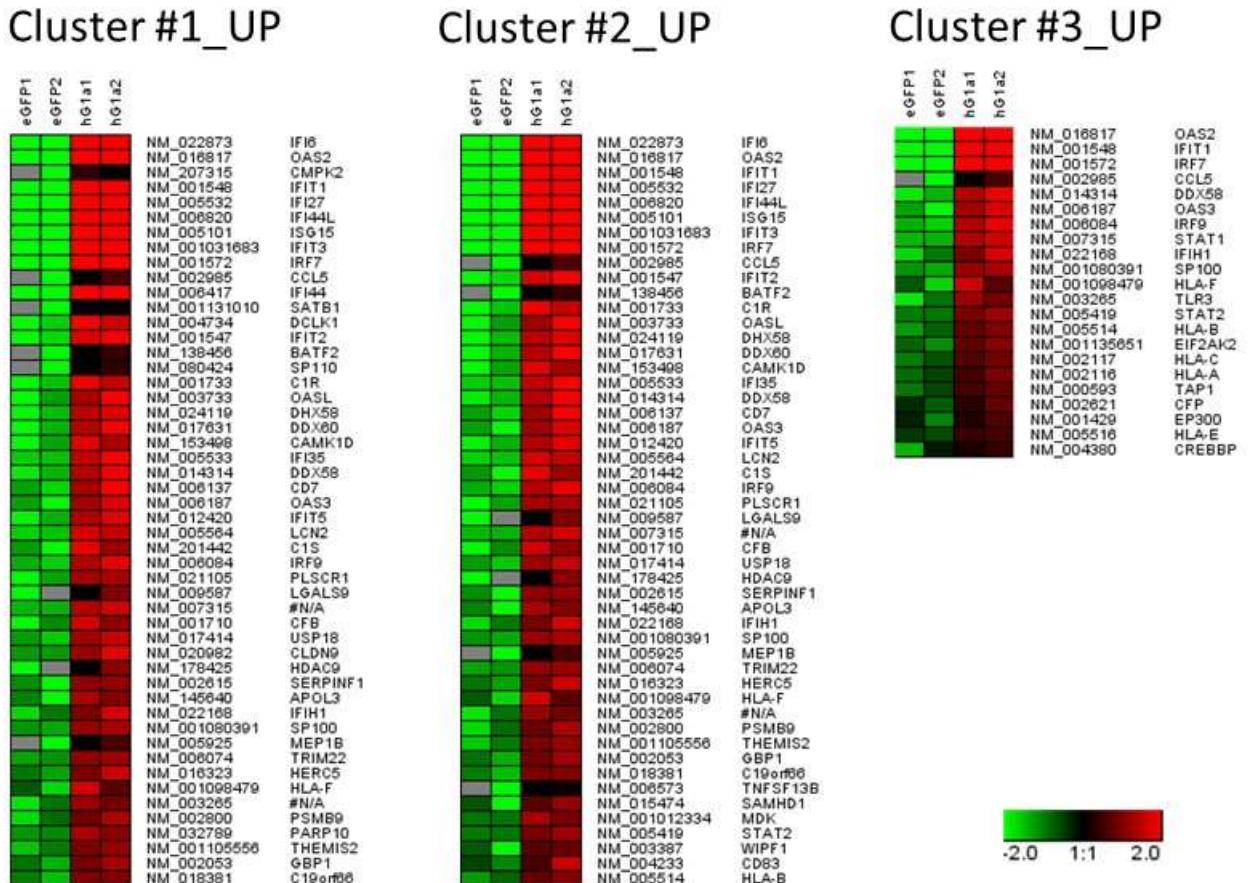

(A) Representative micrographs of three microplate slots per experimental group (stained colonies are visible as dark spots). Diameter of a slot is 35 mm. *Left:* MCF10A^{eGFP} (*top*) and MCF10A^{GIRK1} (*bottom*). *Right:* MCF7^{eGFP} (*top*) and MCF7^{GIRK1} (*bottom*).

(B) Statistical analysis of MCF10A lines. *Top:* Number of colonies formed (per 100 cells seeded out). *WT:*

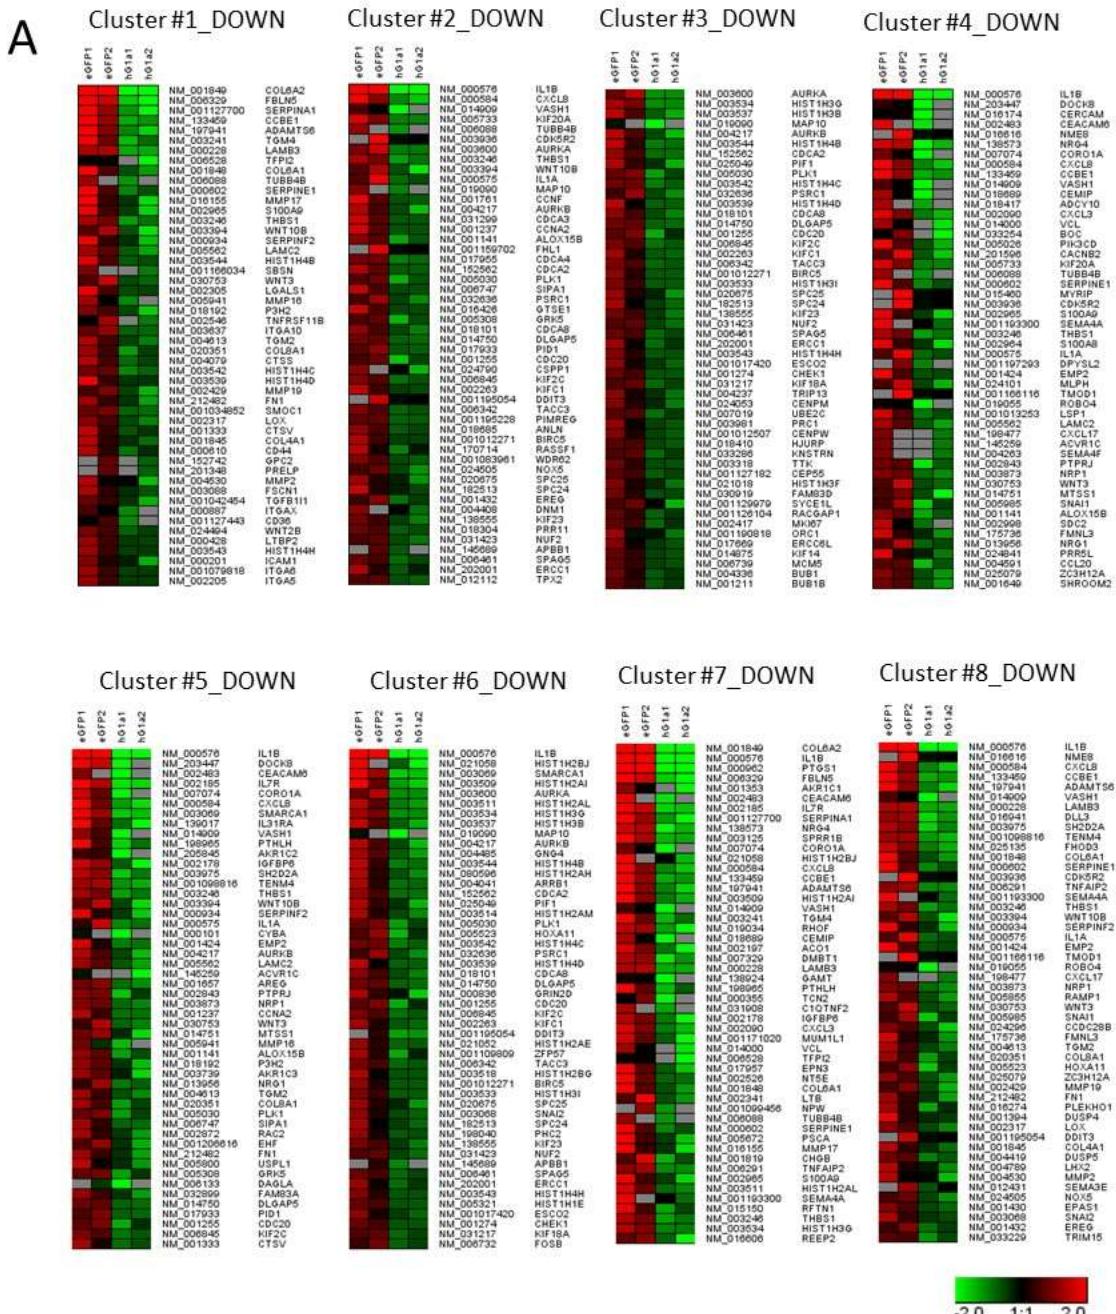

MCF10A^{WT}, *eGFP*: MCF10A^{eYFP} and *GIRK1*: MCF10A^{GIRK1}. *Bottom:* areas of colonies at time of harvesting. *WT*: MCF10A^{WT}, *eGFP*: MCF10A^{eYFP} and *GIRK1*: MCF10A^{GIRK1}. The median value is represented by the black line within the box, box margins represent 75% and 25% percentiles, whiskers indicate 90% and 10% percentiles. The red line represents the mean value. Individual values outside the 10% and 90% percentiles are shown as black circles. The numbers of replicates performed is given above each box in parenthesis. The differences between the experimental groups, neither for the number of colonies formed, nor for colony area, are not statistically significant different.

(C) Similar to (B), but results of MCF7 lines are shown. The differences between the experimental groups, neither for the number of colonies formed, nor for colony area, are not statistically significant different.

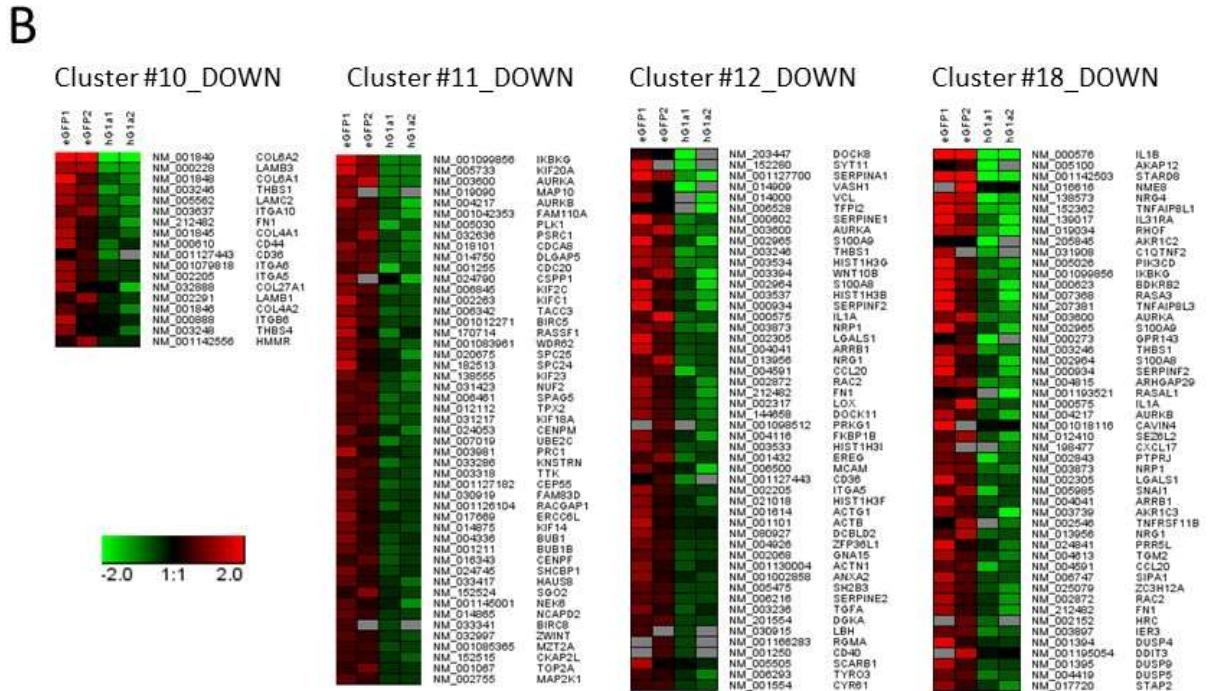

Supplementary Figure S3: Heat maps of significantly UP-regulated gene clusters:

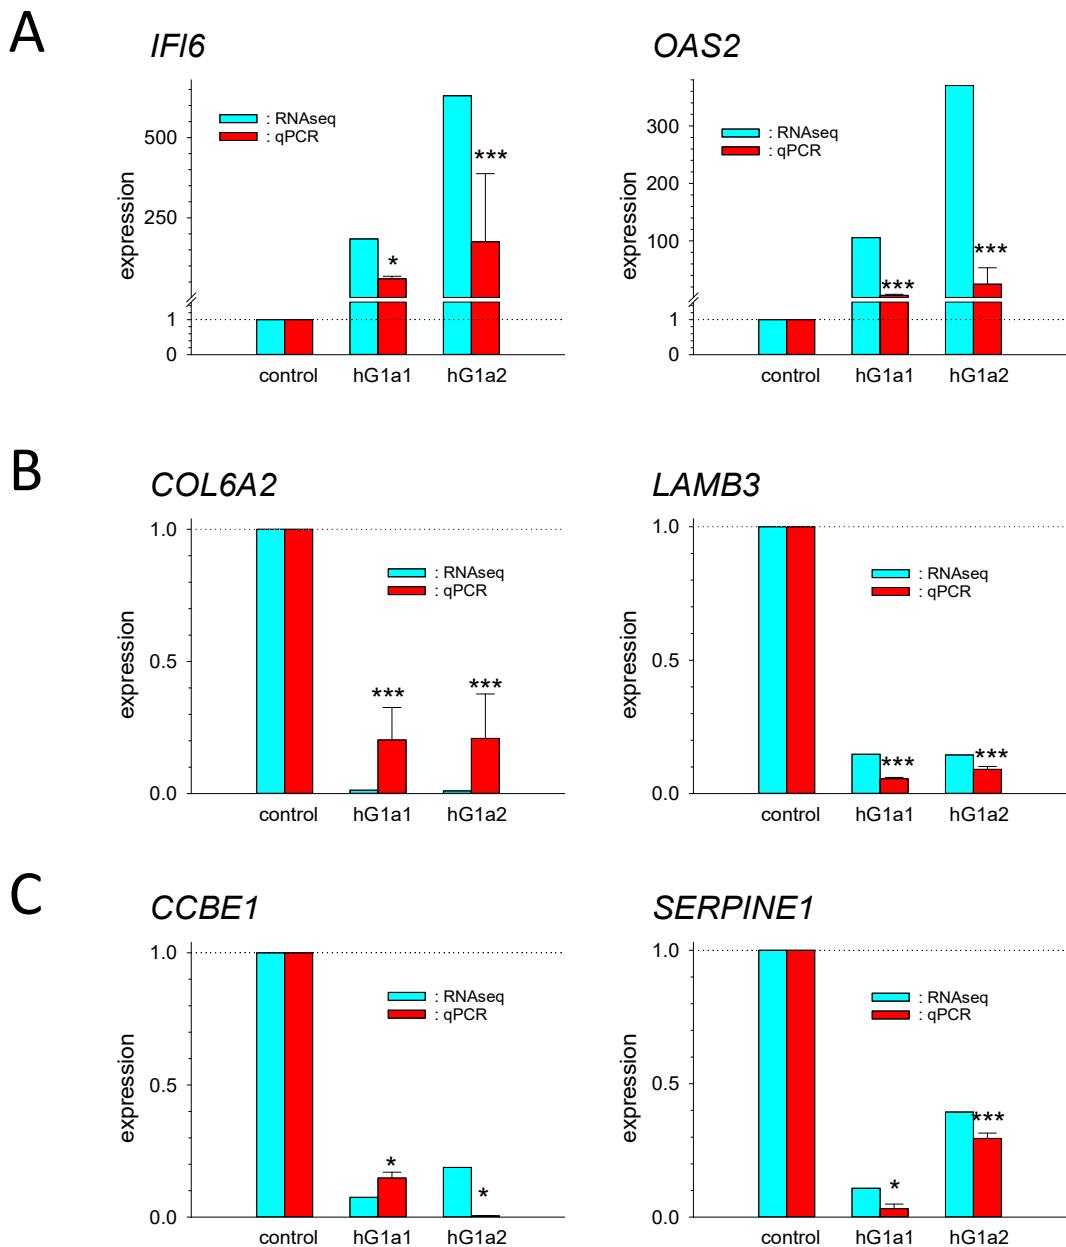

Supplementary Figure S4A: Heat maps of significantly DOWN-regulated gene clusters:

Supplementary Figure S4B: Heat maps of significantly DOWN-regulated gene clusters:

Supplementary Figure S5: Validation of RNA-seq by qPCR:

RNA-seq expression of six genes, selected from the three most important clusters was confirmed by independent qPCR (YWHAZ was used as reference for qPCR; see supplementary Table S2 for primer sequences). Expression level of the gene of interest in the libraries derived from GIRK1 overexpressors was normalized to one of the control libraries and are shown as fold change on the y-axis (eGFP1 was used as control for hG1a1 and eGFP2 as control for hG1a2, respectively). A high correlation between RNA-seq and qPCR expression levels could be detected. All genes were differentially expressed in comparison to the reference (*, (**)): p-value is statistically significantly different at the <0.05, (0.001) level. **(A)**: Gene cluster IF γ , **(B)**: Gene cluster ECM and **(C)**: gene cluster migration.
