

Supplementary Figure S2. Higher numbers of tubule epithelial cells transduced with higher dose of AAVrh10. An mT/mG mouse was administered a retro-ureteral injection of 1×10^{12} GC of AAVrh10-Cre and sacrificed at day 7. Shown are representative confocal microscopy images of tubule structures containing higher quantities of transduced cells than images in Figure 7. Magnification $20\times$.
