

Figure S7

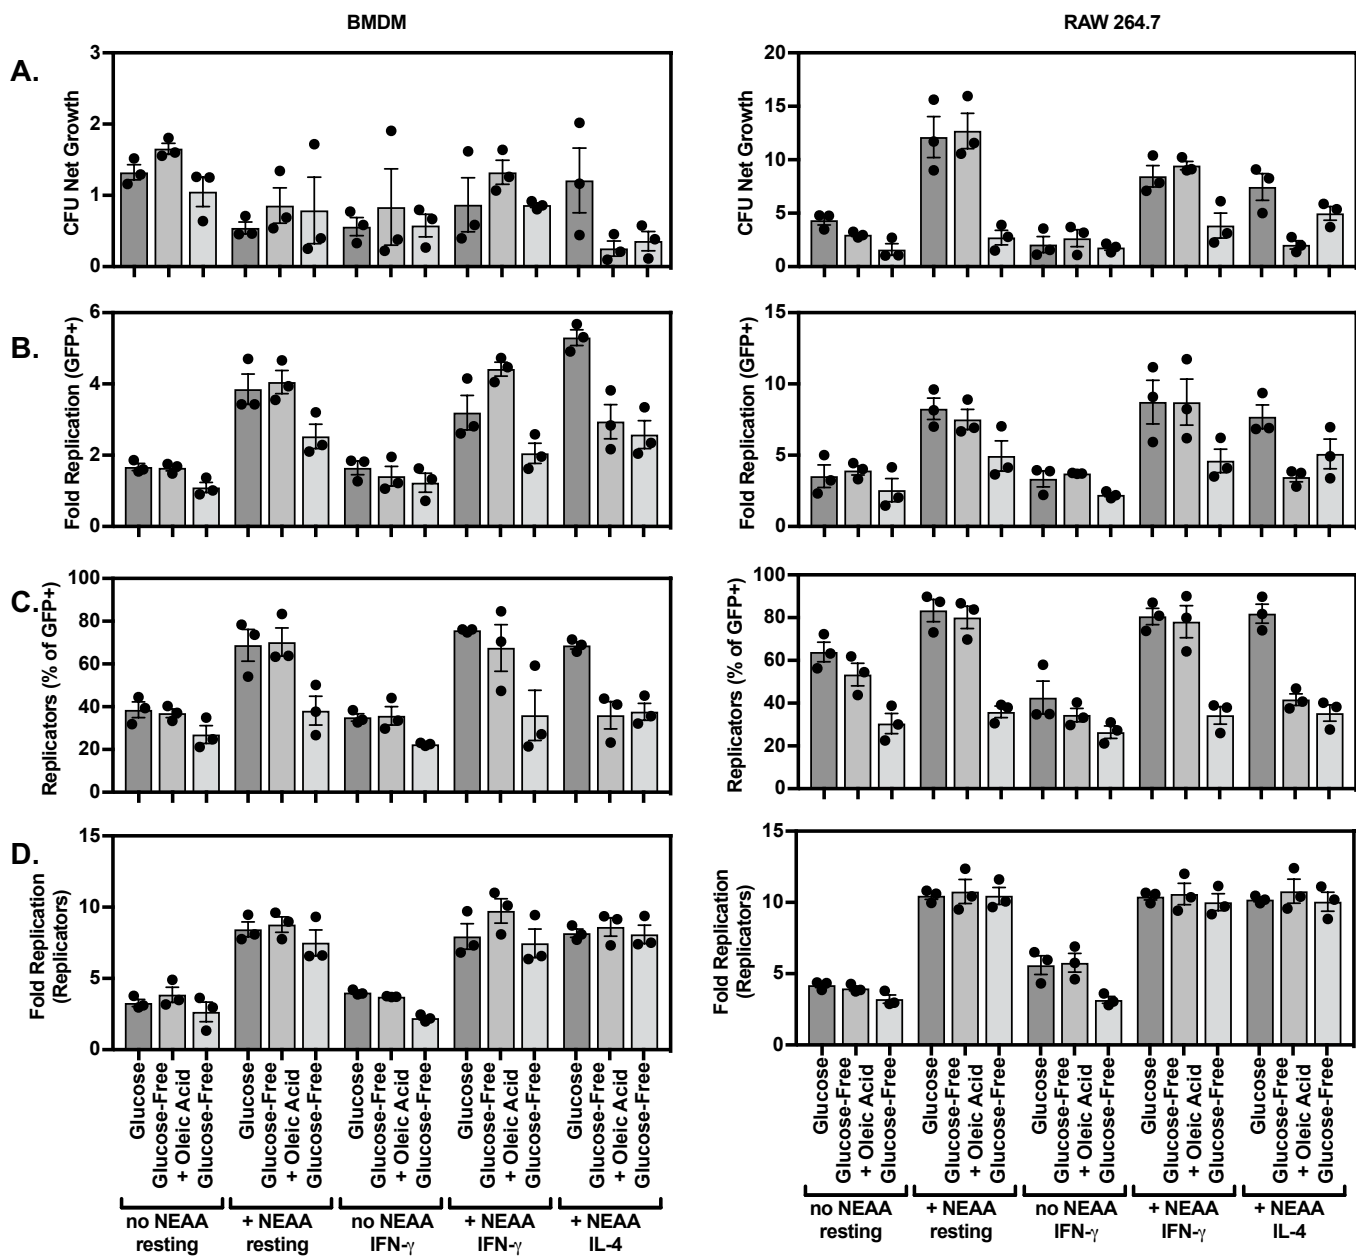

Figure S7. The addition of NEAA to cell culture media increased the replication of wild type *Salmonella* in BMDMs and RAW264.7 cells. A) CFU Net Growth, B) Fold Replication, C) Percent of Replicators, and D) Fold Replication of Replicator data for wild-type *Salmonella* compiled from from Figures 6, 7 and S 4 - 6. We note that survival (CFU) in BMDMs, unlike RAW264.7 cells, does not appear to change in the presence of NEAA.
