O-3	4-3	48,368,880	4,353,199,200

**Figure S1.** Venn diagram with the number of differentially expressed genes in samples N1, N2, and O compared to E (based CPM; counts per million reads mapped). Cut-offs of 2-fold (left) and 8-fold (right) regulation. E: Exponential growth (37 h); N1: Transition (54 h); N2: Lipid accumulation (90 h)

The differential expression was calculated using the "Differential Expression for RNA-Seq 1.0" tool comparing between all group pairs, combining the 3 replicates in groups and with no additional controls set. Venn diagrams were generated from the differential expression files by the "Create Venn Diagram for RNA-Seq 0.1" tool.

## Methods

### Reconstruction of incomplete genes

During the manual curation of the genes of interest some partial genes were identified, including T66005414.1 and T66005224.1 that both encoded partial polyunsaturated fatty acid synthase subunit A (pfaA) genes; T66000202.1, which encoded a partial polyunsaturated fatty acid synthase subunit C (pfaC), and T66002139.1, which encoded a partial glutamine synthetase. Additionally, no phosphopantetheinyl transferase (pfaD) gene had been called during the original annotation process. An annotated draft genome assembly of *Hondaea fermentalgiana* FCC1311 (Genbank: BEYU00000000.1) was recently published and in addition a draft genome assembly with 9 annotated genes related to fatty acid synthesis is available of *Thraustochytrium* sp. ATCC 26185 (Genbank: MUFY01000000; KX651612- KX651618; AB762292- AB762293) (Meesapyodsuk and Qiu, 2016<sup>1</sup>; Zhao et al 2016<sup>2</sup>). The pfaA encoded by KX651612 (showing 100% identity to bp. 200371-203795 of Genbank: KQ758867 and 99.90% identity to bp. 113505-110610 of Genbank:KQ758864), the pfaC encoded by KX651614 (showing 99.97% identity to bp 526485-522565 of Genbank: KQ758850), and the pfaD encoded by KX651615 (showing 99.74% identity to bp 16311163-1631929 of KQ758850) were used as BLAST queries to reconstruct the corresponding genes from *Aurantiochytrium* sp. T66. Due to the very high sequence similarity between the two strains, missing sequences were adapted from the *Thraustochytrium* sp. ATCC 26185 sequences and corrected with RNA-Seq read mapping. Similarly the glutamine synthetase was reconstructed by fusing bp 1518-2104 from Genbank: LNGJ01005523 to bp 8203375 8203835 of KQ758850 based on alignment to the *H. fermentalgiana* FCC1311 (Genbank: BEYU01000128 gene FCC1311\_089412; protein id: GBG32716) sequence (89.06% identical) and to bp 1-1047 of the *Thraustochytrium* sp. ATCC 26185 contig MUFY01000151 (99.9% identical). The resulting genes - T66011701 encoding pfaA, T66011702 encoding pfaC, T66011703 encoding pfaD, and T66011704 encoding glutamine synthetase replaced the partial genes and were included in the template file for RNA-Seq analysis.
