### ECD calculation for compounds **1–4**

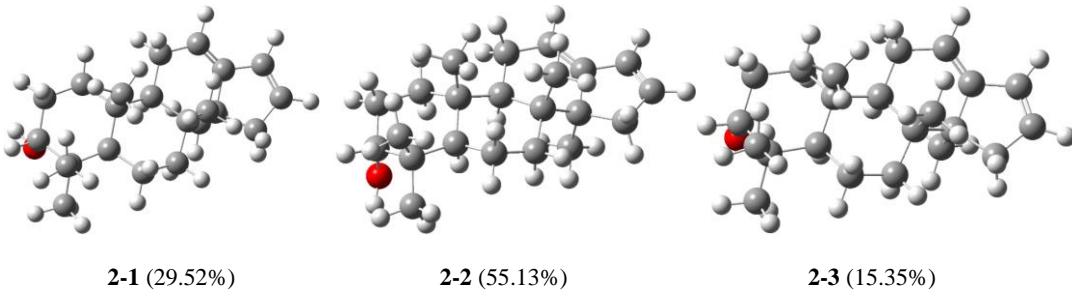

Conformation search using molecular mechanics calculations was performed in CONFLEX version 7.0 with MMFF force field with an energy window for acceptable conformers (ewindow) of 5 kcal/mol above the ground state, a maximum number of conformations per molecule (maxconfs) of 100, and an RMSD cutoff (rmsd) of 0.5 Å. Then the predominant conformers were optimized at B3LYP/6-311+G(d) level in Gaussian 09 (Frisch et al. 2009)<sup>[1]</sup>. The optimized conformation geometries and thermodynamic parameters of all selected conformations were provided. The optimized conformers of **1–4** were used for the ECD calculation, which were performed with Gaussian 09 (B3LYP/6-311+G(d)). The solvent effects were taken into account by the polarizable-conductor calculation model (PCM, methanol as the solvent). Percentages for each conformation are shown in Table S1.

### Selected conformation of **1** and their percentage

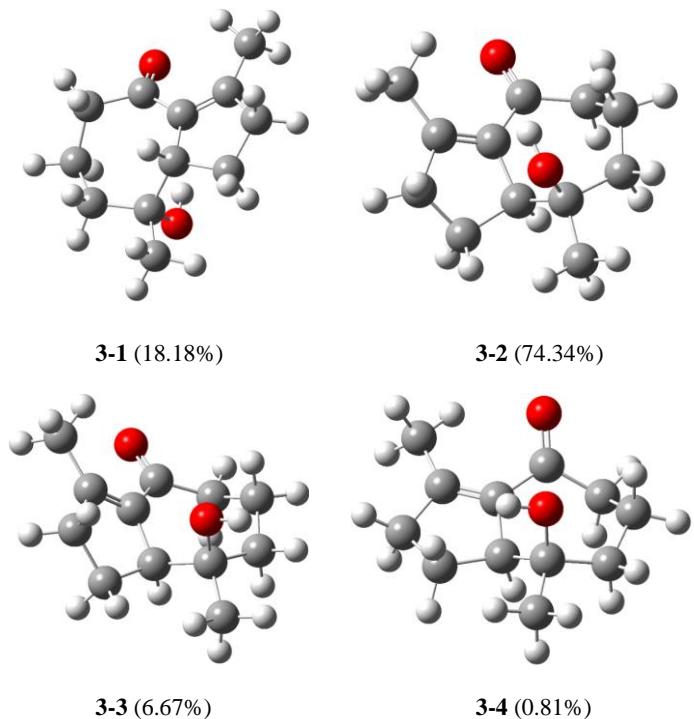

**Figure S47.** The lowest energy conformers of **1** (the relative populations are in parentheses).

### Selected conformation of **2** and their percentage

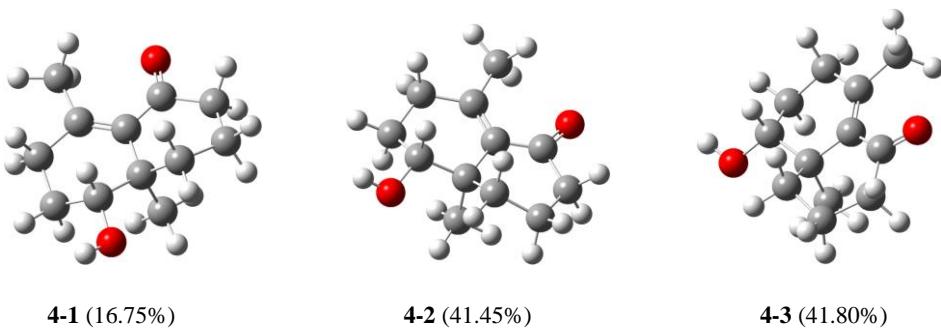

**Figure S48.** The lowest energy conformers of **2** (the relative populations are in parentheses).

### Selected conformation of **3** and their percentage

**Figure S49.** The lowest energy conformers of **3** (the relative populations are in parentheses).

#### Selected conformation of **4** and their percentage

**Figure S50.** The lowest energy conformers of **4** (the relative populations are in parentheses).

**Table S1.** Extracted heats and weighting factors of the optimized conformers of **1–4** at B3LYP/6-31+G(d) level

|          |           | B3LYP/6-31+G(d) |                                       |
|----------|-----------|-----------------|---------------------------------------|
