Fig. S1. Characterization of the *i17* locus (ENSEMBL ID: ENSDARG00000092045). (A) Schematic of the region on chromosome 24 (GRCZ11) containing the *i17* gene (*si:dkey-225k4.1*) relative to the flanking *zc2hc1a* gene. (B) Structure of four transcript isoforms arising from the *i17* locus as determined by cDNA cloning; for comparison, the structure of the transcript emanating from the mutant *i17#17A* allele is also indicated. In wild-type fish, isoform 1 represents the most prevalent transcript species. (C) Conceptual translation of the transcripts shown in (B). (D) Sequence comparison of the conceptually translated proteins for zebrafish and fugu (Genbank accession number NP_001129620.1) (1) *i17* proteins. (E) Sequence comparisons of the conceptually translated proteins for zebrafish and mouse (Genbank accession number NP_032397.1) *i17* proteins. For (D) and (E), identical amino acid residues are in bold face capital letters.

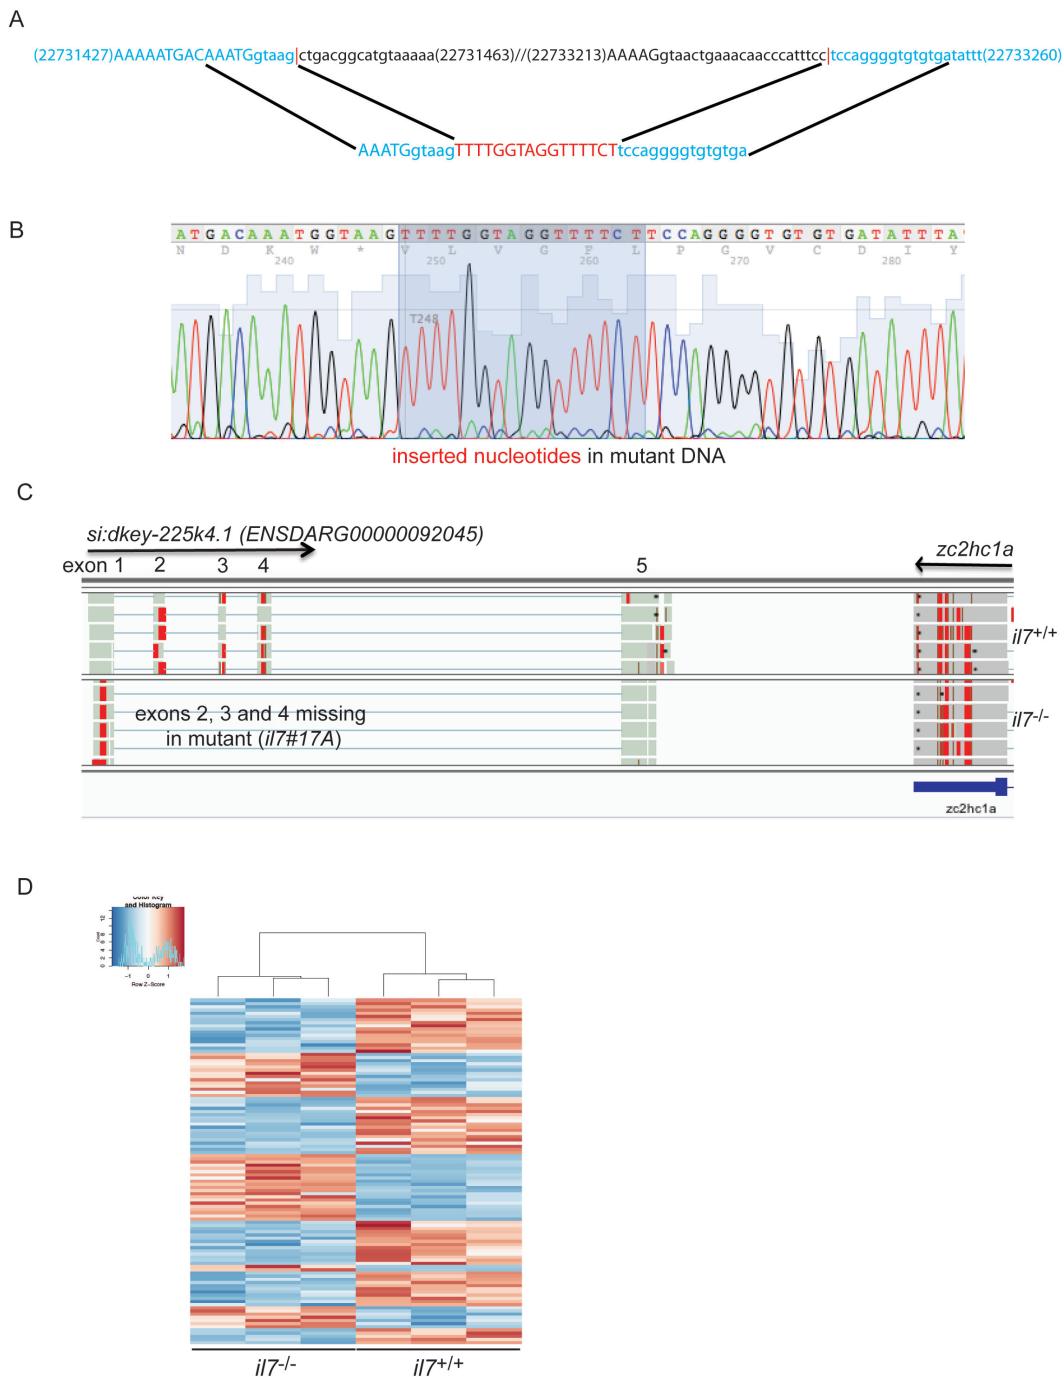

Fig. S2. Characterization of the *iL7#17A* allele. (A) Sequence analysis of the breakpoint regions of the *iL7#17A* allele. The nucleotide coordinates on chromosome 24 are indicated in brackets; exon sequences are in upper case, intron sequences are in lower case (compare to Fig. 1E). The 16 nucleotides of non-templated sequences joining the two ends of the deletion are indicated in red upper case. (B) Sanger sequence traces for the region across the deletion in the gene. (C) Kidney marrow RNA reads mapping to the *iL7* genomic region, indicating that sequences corresponding to exons 2-4 are not present in transcripts of *iL7*-deficient animals. By contrast, no differences in reads mapping to the *zc2hc1a* flanking gene are observed, as expected; n=5 each for each genotype. (D) Heat map displaying differentially expressed genes in wild-type and *iL7*-deficient kidney marrow tissue (see Table S1).

Although only few changes are observed, they are highly reproducible across genotypes. When differential gene expression analysis was conducted using RNA from whole embryos at 5 dpf, no significantly expressed genes were found between wild-type and *iL7*-deficient embryos, attesting to the negligible effects of the mutation in the context of the entire organism.

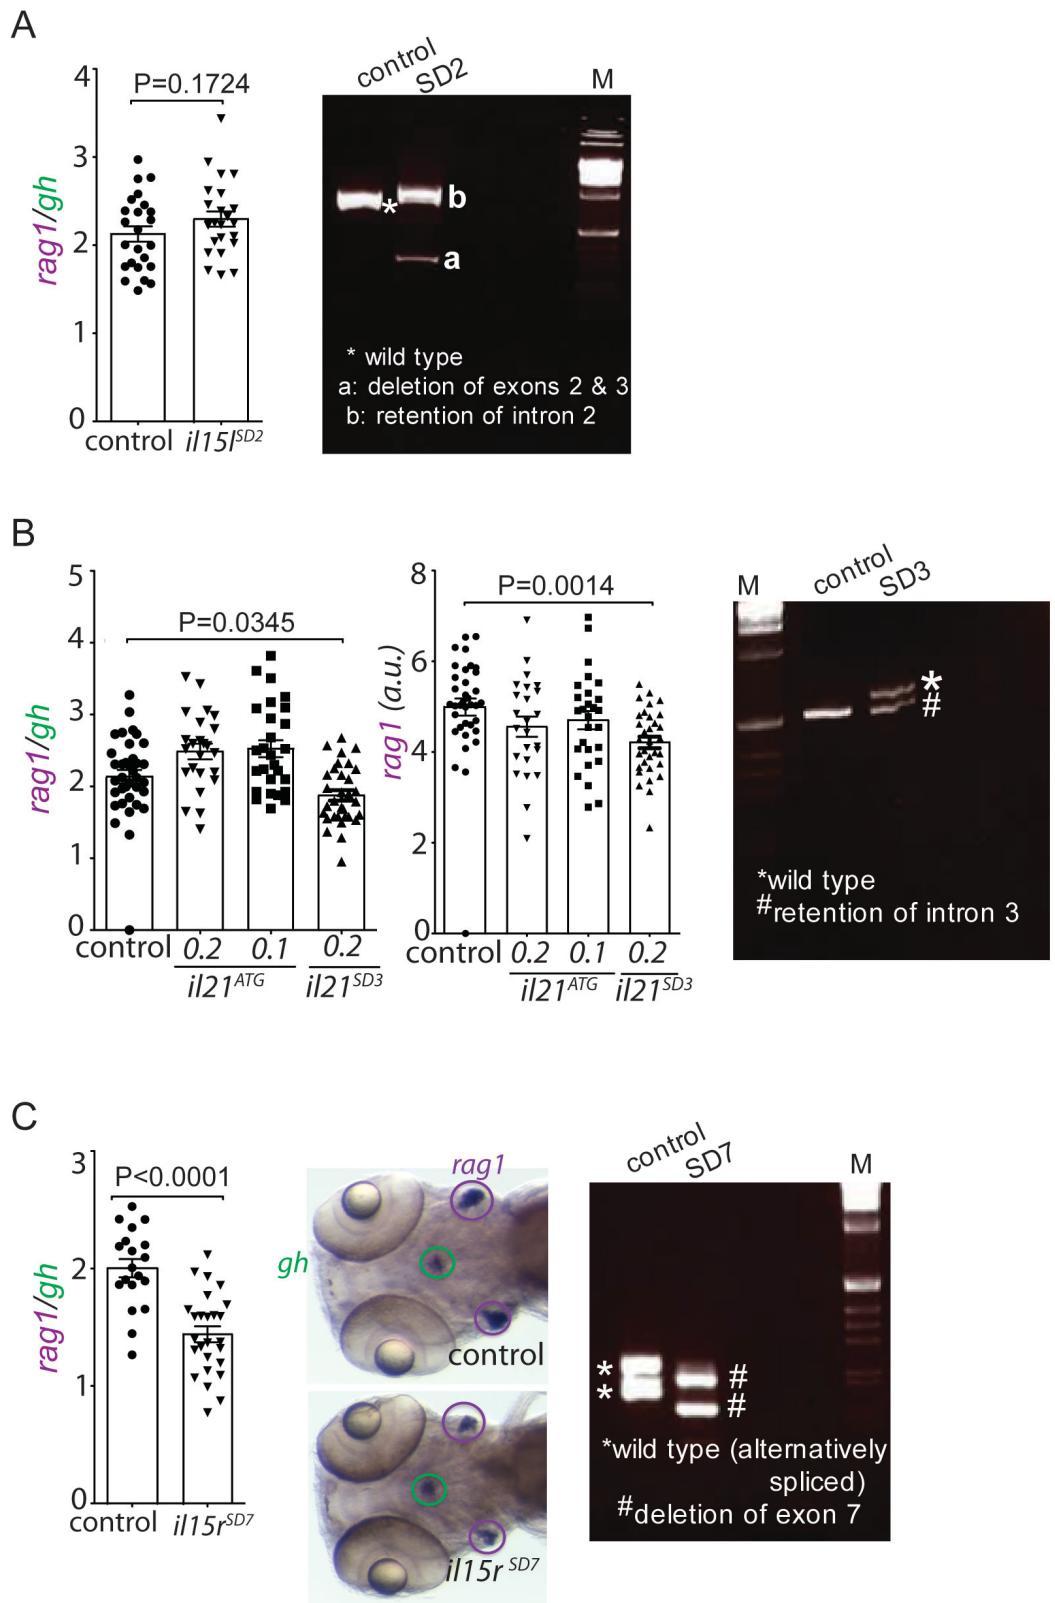

Fig. S3. Characterization of *il15l*, *il21*, and *il15r* morphants. (A) Unaffected thymopoietic activity in *il15l* morphants as determined by the thymopoietic index (left panel); each data point represents one fish; mean±SEM. RT-PCR analysis of *il15l* cDNA structures resulting from interference with splicing of the pre-mRNA transcripts by an anti-sense oligonucleotide targeting the splice donor site of exon 2 (SD2) (right panel). (B) Minor impairment of thymopoietic activity in *il21* morphants as determined by the thymopoietic index (left panel); each data point represents one fish; mean±SEM. RT-PCR analysis of *il21* cDNA structures resulting from interference with splicing of the pre-mRNA transcripts by an anti-sense oligonucleotide targeting the splice donor site of exon 3 (SD3). Note that the apparent reduction of the *rag1/gh* ratio in SD3 morphants is the result of slightly higher numbers of *gh*-expressing cells. The anti-sense oligonucleotides were also injected at higher concentrations than usual (0.2mM), as indicated. (C) Reduced thymopoietic activity in *il15r* morphants as determined by the thymopoietic index (left panel) derived from quantitative analysis of whole mount RNA *in situ* hybridization experiments (middle panel); each data point represents one fish; mean±SEM. RT-PCR analysis of *il15r* cDNA structures resulting from interference with splicing of the pre-mRNA transcripts by an anti-sense oligonucleotide targeting the splice donor site of exon 7 (SD7) (right panel).

Table S2. Generation and characterization of cytokine gene morphants.

Gene	ATG morpholino (5'>3')	Splice morpholino (5'>3')	final concentration	target site in gene	Analysis primers			aberrant cDNA structure	
					First round forward	First round reverse	Second round forward	Second round reverse	
i17	TGCATTGTCATTTGGAGGCATGT	GGAAATGGGTGTTTACGTTACCTT	0.1		CAGTTACGCACTTGACGTTCT	CCTGAATCTGTGAATGTTGCA	CGAACGCATATAGCCCCATC	TTGTGAATGTTGCAAAGTGGGT	see Fig. 1D
i17			0.1 SD exon 4						
i12	AGAGCACACATCCTCATCATCATCA	CAACCCCTACAGAGAAACAGAGACAG	0.1		n/a				
i12			0.1 SA exon 3		CGCACACACTGATGATGATGA	TTCCTGCCATTGTTCATC	AGGATGTCGCTCTACACTG	ACGTTCTTCAGGAACGTCATG	see Fig. 5C
i115	AGAGGTCACTGAAATCATCGAAC	GTTCTCTGCAAGAAATCACACACAC	0.1		n/a				
i115			0.1 SD exon 2		CGCTTCGATGATTCAGTGAC	GGATGTCCTGCTTGACCTTC	TCGATGATTTCAGTGACCCCTC	GTCCTGCTTGACCTTCAGTC	see Fig. 5F
crlf2	ACACAAACTCCAGTTGATCATGACT	TCTGCATGAAAGCAAAACAGCCTGT	0.2		n/a				
crlf2		ACAGACATCTGTGAAACAAATTCTT	0.2 SA exon 3		GCAGTACAAGGCCAATGTG	CTGAAAATGCTCAGTGTCAT	GCCAATGAGAAAGACTGG	TGGTACTTCAGGAAGAACGAG	cryptic splice site in exon 3 used.
i115l		AGTAAATCATGTTGACCACATTGT	0.2 SD exon 2		dito				exon 4 is skipped.
i121	ACACGCCCTCATGTTAACAGATGAC	CATGTAATAAACACACACTCACGAT	0.2		CAACAATGAGCGGGTGACGA	ACTCTGACTTGGATTCCAC	ACAATGAGCGGGTGACGACT	GTAATTGTTGAGCTTGGAGCAG	see Fig. Fig. S3A
i121			0.2 SD exon 3		n/a				
i115r	CATGTCACCTTGCCCAGAGAACCC	ATCTGAGCTGATGTTACTCACATT	0.1		ACGGCCCTCTCGATTACATC	GAGATTTACCAACACGGTGG	AGGTGATCGACACCTGTGT	ACGCTTGACGGGCATAGATC	see Fig. Fig. S3B
i115r			0.1 SD exon 7		n/a				
					CAATTGCCAGCAGCATCGCT	TCTCGACGTCTTGACCTCCA	AGCAGCATCGCTACCAGACA	ACGTCTTGACCTCCACCAGA	see Fig. Fig. S3C
