

Supplementary data

Supplementary Figure 1. Study on the relationship between senescence and flowering by using ecotypes and experimental analysis of the underlying mechanism via using genetic and biochemical data in *Arabidopsis*. **(A-B)** the senescence and flowering phenotypes of six ecotypes on long-day conditions (16 h light/8 h dark). **(C-H)** EIN3, a positive regulator of leaf senescence, induces early flowering by directly binding *FLOWERING LOCUS T* (*FT*) and increasing its expression (***, P < 0.001).
