

Figure S1

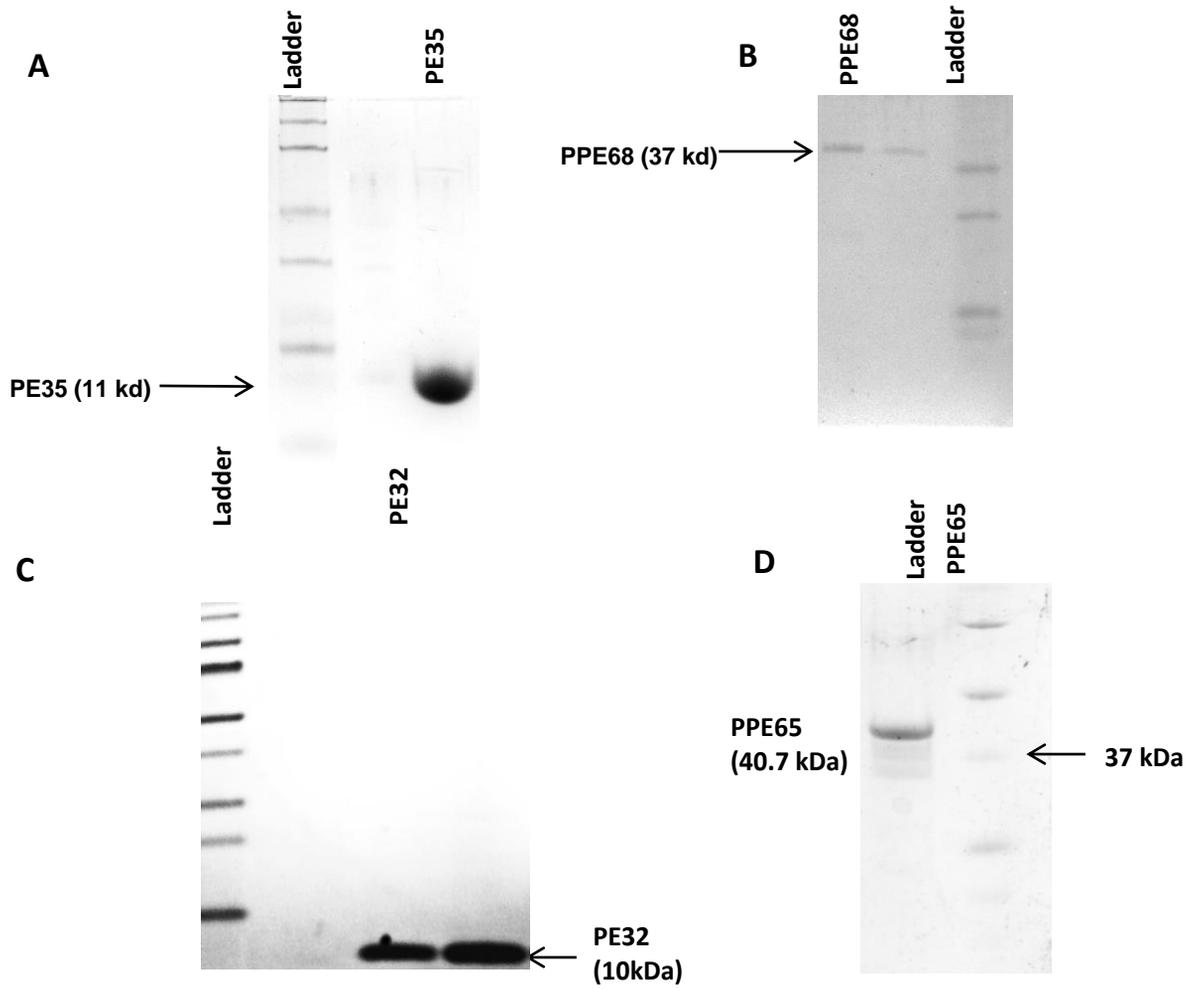

Figure S1: SDS-PAGE image of the purified PE32, PPE65, PE35 and PPE68 proteins.

Figure S2

	Disordered (80-100%)	Partially Disordered (20-80%)	Ordered (0-20%)
PPE(69)		65	4
PE(35)	1	32	2
PE_PGRS(64)	31	31	3

Figure S2: Structural analysis of the PE-PPE/PGRS protein family using RONN.

Each subfamily was divided into three groups, i.e. completely disordered members with more than 80% disorder, partially disordered members with disorder between 20-80% and ordered proteins having less than 20% structural disorder

Figure S3

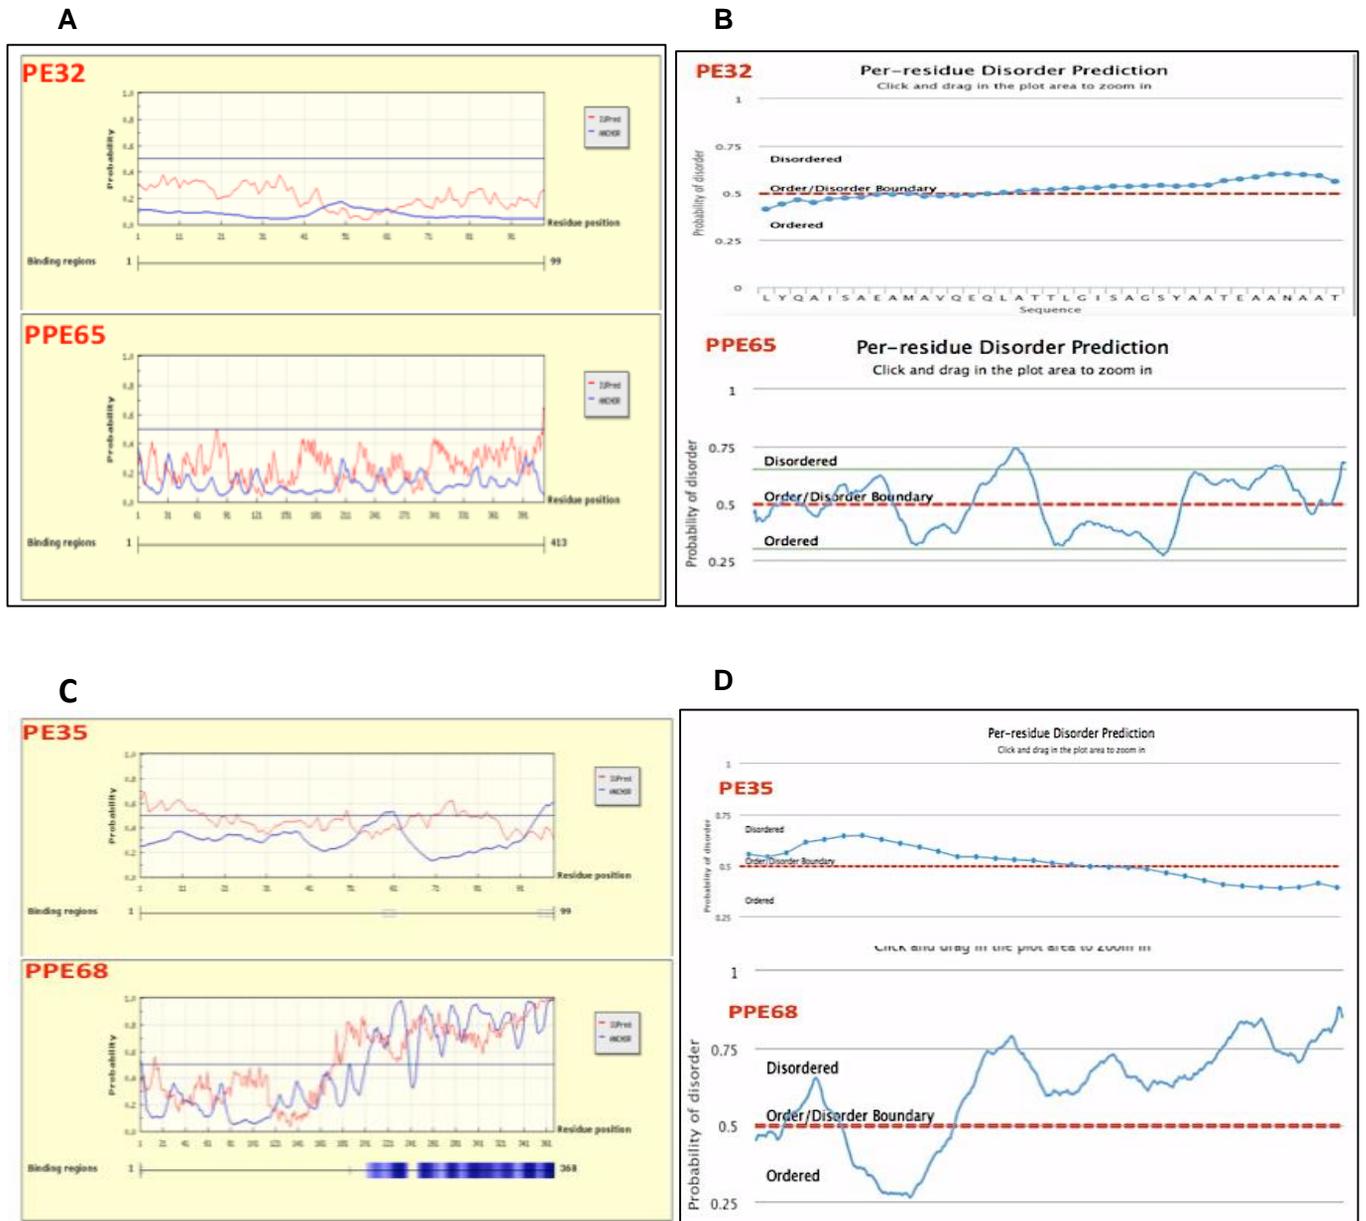

Figure S3: Structural disorder predictions for PE32, PE35, PPE65 and PPE68: (A) Predicted IUPred disordered regions and disordered binding sites using the ANCHOR tool in PE32 and PPE65. (B) Predicted disordered regions in PE32 and PPE65 using RONN. (C) Predicted IUPred disordered regions and disordered binding sites in PE35 and PPE58 using ANCHOR. (D) Disordered regions in PE35 and PPE68 as predicted by the RONN tool.

Figure S4: Alignments of our investigated PE and PPE proteins to those with available complex structure. The (A) PPE41, PPE65 and PPE68 proteins as well as the (B) PE25, PE32 and PE35 proteins were aligned using Clustal Omega 1.2.4. The regions of the PPE and PE domains are marked by light grey and yellow backgrounds, respectively.

Figure S5

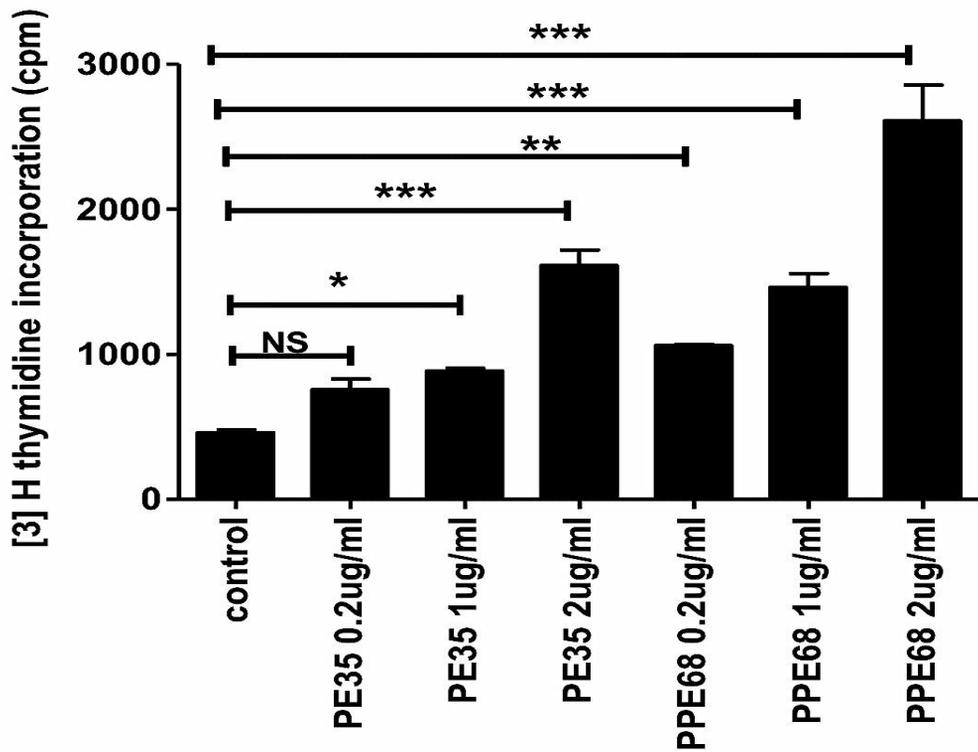

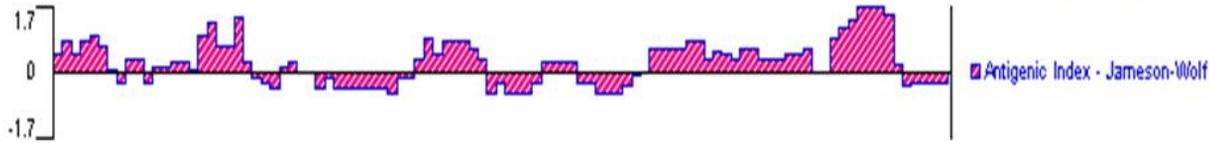

Figure S5: Individual recombinant PE35 and PPE68 proteins induce cell proliferation. Different concentrations of individual recombinant proteins were used for re-stimulating the splenocytes in culture for 72 hrs. 3[H] thymidine (0.5mci/ml) was added to each well and incubated at 37o C for 24 hours. Cells were harvested and β scintillation counter was employed for counting Beta activity. Beta activity was significant for the cells re-stimulated with 1 μ g/ml or higher dose of PE35 while it was significant for 0.2 μ g/ml or higher dose of PPE68, suggesting PPE68 to be more antigenic. Data represents experiments with three mice in each group . Statistical significance was determined by one-way ANOVA and data represented as mean \pm SD . p value <0.05 was considered statistically significant.

Figure S6

PE35

PPE68

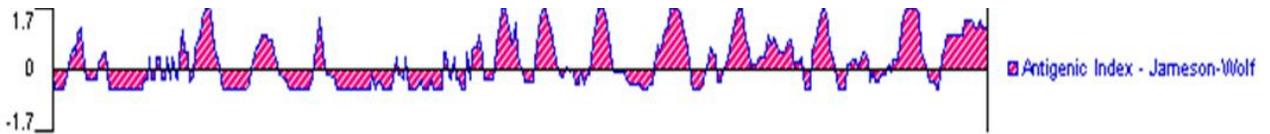

Figure S6: Antigenic index of PE35 and PPE68. Antigenicity plots depicting the antigenic regions of PE35 and PPE68.

Supplementary Table S1: Identifiers of the protein family members and secretome proteins used in the analyses.
