2. Did RN intervene (see optional scripts below)?

YES If yes, did parent complete HH? NO YES Soap/water Hand gel

NO

3. Did RN do parent/visitor HH education? YES NO

Optional scripts for intervening before parents/ visitors touch baby:

“Hand washing before touching your baby is the single most important thing you can do to protect them. Here’s some gel for your hands.”

“Can I get you to rub some of this gel on your hands before touching your baby? This is the easiest and most important thing you can do to keep from spreading germs. “

“One of the best ways that you can help to keep your baby safe from infection is by washing your hands just before touching him/her. That’s why we keep the hand gel at each bed space”
