

Table S4 Supplementary Material
Methods for Pharmacokinetic Sampling

Blood samples (3mL) for ETC-206 pharmacokinetics were collected at pre-dose and at 0.25, 0.5, 1, 1.5, 2, 3, 4, 6, 8, 12, 24, 30, 36, 48, 72 (\pm 6 minutes) and 144 hours (\pm 30 minutes) after dosing. Samples were collected via phlebotomy in plastic K2EDTA tubes and centrifuged (1300 g) for 10 minutes at room temperature. The serum was separated and stored at -65°C to -80°C until analysis. ETC-206 concentration were quantified using HPLC with MS/MS detection.
