

Supplemental Table 1: Association of transplant variables with the recovery of CD4+ T-cell subsets.

Variable	Naïve CD4+ T cells		CM CD4+ T cells		EM CD4+ T cells		Effector CD4+ T cells		Activated CD4+ T cells	
	Slope (95%CI)	p-value	Slope (95%CI)	p-value	Slope (95%CI)	p-value	Slope (95%CI)	p-value	Slope (95%CI)	p-value
Age (10 years)	-0.171 (-0.376, 0.033)	0.105	-0.052 (-0.225, 0.121)	0.558	0.038 (-0.127, 0.204)	0.653	0.070 (-0.096, 0.237)	0.410	0.045 (-0.088, 0.179)	0.509
8-allele HLA-match*	reference	0.456	reference	0.123	reference	0.808	reference	0.620	reference	0.609
		0.207 (-0.333, 0.748)		0.354 (-0.089, 0.798)		0.054 (-0.378, 0.485)		-0.111 (-0.544, 0.324)		-0.090 (-0.432, 0.251)
Infused viable CD34+ cell dose*	reference	0.292	reference	0.725	reference	0.017	reference	0.992	reference	0.046
		-0.265 (-0.754, 0.222)		0.073 (-0.335, 0.480)		0.472 (0.094, 0.851)		0.002 (-0.393, 0.396)		0.322 (0.013, 0.636)
Infused viable CD3+ cell dose*	reference	0.043	reference	0.405	reference	0.949	reference	0.265	reference	0.836
		0.506 (0.026, 0.990)		0.175 (-0.233, 0.586)		-0.013 (-0.406, 0.380)		0.226 (-0.168, 0.621)		0.034 (-0.283, 0.351)
CMV reactivation by day 60	reference	0.038	reference	0.002	reference	0.082	reference	0.738	reference	0.386
		-0.534 (-1.029, -0.040)		-0.644 (-1.046, -0.242)		-0.364 (-0.769, 0.041)		0.070 (-0.336, 0.475)		0.150 (-0.186, 0.487)
Day 100 aGVHD grade	reference	0.921	reference	0.102	reference	0.389	reference	0.186	reference	0.048
		-0.007 (-0.671, 0.657)		-0.346 (-0.887, 0.196)		-0.290 (-0.830, 0.250)		0.276 (-0.248, 0.800)		-0.377 (-0.807, 0.051)
		-0.138 (-0.956, 0.680)		-0.740 (-1.407, -0.075)		-0.465 (-1.129, 0.199)		0.609 (-0.033, 1.250)		-0.669 (-1.185, -0.155)

* engrafting CB unit

There was no association with the variables of recipient gender, diagnosis (acute leukemia vs. MDS/MPD vs. lymphoma), or the addition of haplo-identical CD34+ cells (data not shown).

Supplemental Table 2: Association of transplant variables with the recovery of CD8+ T-cell subsets.

Variable	Naïve CD8+ T cells		CM CD8+ T cells		EM CD8+ T cells		Effector CD8+ T cells		Activated CD8+ T cells	
	Slope (95%CI)	p-value	Slope (95%CI)	p-value	Slope (95%CI)	p-value	Slope (95%CI)	p-value	Slope (95%CI)	p-value
Age (10 years)	-0.112 (-0.285, 0.060)	0.209	0.019 (-0.122, 0.159)	0.797	0.082 (-0.147, 0.312)	0.486	0.160 (-0.081, 0.402)	0.197	0.140 (-0.069, 0.350)	0.195

* engrafting CB unit

There was no association with the variables of recipient gender, diagnosis (acute leukemia vs. MDS/ MPD vs. lymphoma), or the addition of haplo-identical CD34+ cells (data not shown).

Supplemental Figure Legends

Figure S1. Association of CMV reactivation with CD4+ T-cell subset recovery in adult CBT recipients. (A) Naïve CD4+ T cells. (B) CM CD4+ T cells. (C) EM CD4+ T cells. (D) Effector CD4+ T cells. (E) Activated CD4+ T cells. Individual patient time-points in panels A-E are color coded according to CMV reactivation by day 60. Curves are Loess-smoothed averages.

Figure S2. Association of CMV reactivation with CD8+ T-cell subset recovery in adult CBT recipients. (A) Naïve CD8+ T cells. (B) CM CD8+ T cells. (C) EM CD8+ T cells. (D) Effector CD8+ T cells. (E) Activated CD8+ T cells. Individual patient time-points in panels A-E are color coded according to CMV reactivation by day 60. Curves are Loess-smoothed averages.
