**Supplementary Figure 1. Mass spectroscopy analysis of Hr10.** a) The mass spectrum from the intact Hr10 sample. Major peaks are displayed with assigned charges. b) Table of the largest peaks showing the m/z ratios for the largest peaks, the calculated charge and resulting molecular weight. The molecular weight calculated from nine peaks is  $119868.9 \pm 0.5$  (mean  $\pm$  S.D.) as compared to the calculated molecular weight of the protein lacking the N-terminal Met and with a single L-Har substitution (11,969.3). Peaks corresponding to the protein with Arg at 1493 could not be identified (not shown).

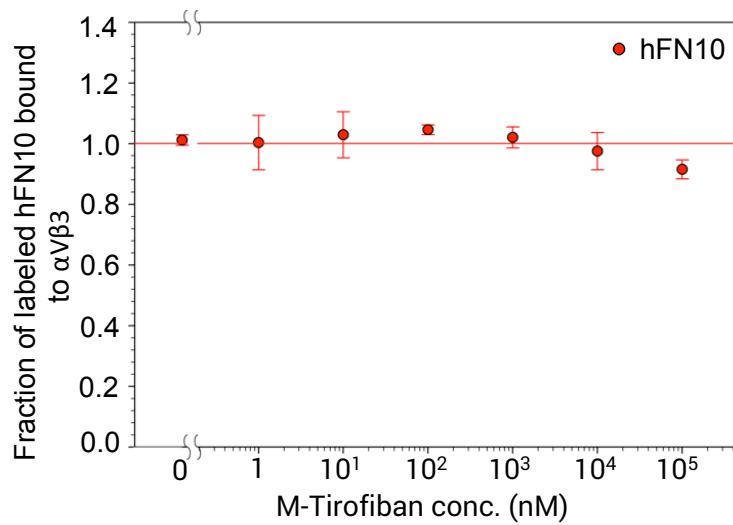

**Supplementary Figure 2. Gating strategies used for ligand binding studies.** a) Gating strategy for live stable  $\alpha$ IIB $\beta$ 3-K562 cells used in FACS analysis presented in Fig. 2a, 2b *inset*, 2c, Fig.5c, Fig.7c and Fig.8c, d. b) Gating strategy for live stable  $\alpha$ V $\beta$ 3-K562 cells used in FACS analysis presented in Fig. 2b, 2b *inset* and Supplementary Fig.5. c) Gating strategy for fresh human platelets in PRP used in FACS analysis presented in Fig.2d 2d *inset* and Fig.8a. d) Gating strategy for fresh human platelets in whole blood used in FACS analysis presented in Fig. 4f.

**Supplementary Figure 3. Human platelet clearance in humanized mice.** Humanized mice infused with human platelets were then injected with PBS, Hr10 or M-Tirofiban and platelet count was checked 10 and 60 minutes after injection (mean  $\pm$  S.E; n=4 per group). Mouse platelet counts at 10 min were scaled to 100%. ns, not significant, based on Student two-tailed t-test.

**Supplementary Figure 5. M-Tirofiban does not bind  $\alpha V\beta 3$ .** Graph displaying the residual binding of fluorescently labeled hFN10 to  $\alpha V\beta 3$ -K562 cells in the presence of increasing amounts of unlabeled M-tirofiban. The plot displays the mean and S.E. for three independent experiments along with a line for the mean value. The mean MFI values for each run were used to normalize the data. A two-way Anova to determine the dependence of the FACS run (factor 1) and the M-Tirofiban dose (factor 2) on the MFI for the three experiments indicated no statistically significant dependence ( $p=0.331$ ) on M-Tirofiban dose.

**Supplementary Table 1. Data collection and refinement statistics.**

<b><i>Data collection</i></b>	<b><math>\alpha</math>V<math>\beta</math>3/Hr10</b>
PDB Code	6NAJ
Beamline	ID19 at APS
Space group	P3 <sub>2</sub> 21
Unit cell dimensions (Å, °)	$a=b=129.7$ , $c=308.2$ ; $\alpha=\beta=90$ , $\gamma=120$
Resolution range (Å)	50-3.1
Wavelength (Å)	0.97932
Total reflections	1,044,981
Unique reflections	55,225 (5,444) *
Completeness	100 (100)
Redundancy	8.2 (8.0)
Molecules in asymmetric unit	1
Average $I/\sigma$	24.9 (2.0)
$R_{merge}$ (%)	9.7 (100)
$R_{meas}$ (%)	10.3 (100)
$R_{sym}$ (%)	3.6 (38.8)
Wilson $B$ -factor	59.6
<b><i>Refinement statistics</i></b>	
Resolution range (Å)	49.2-3.1
$R_{factor}$ (%)	24.9 (33.9)
$R_{free}$ (%) #	27.4 (38.9)
No. of atoms	13,498
Protein	13,137
Water	4
Mn <sup>2+</sup>	8
Glc-NAc	349
Average $B$ -factor for all atoms (Å <sup>2</sup> )	71.1
Protein	69.4
Ligand/Ion	
Ligand (Hr10)	104.4
Mn <sup>2+</sup>	53.8
Water	50.5
r.m.s. deviations	
Bond lengths (Å)	0.004
Bond angles (°)	1.03
Ramachandran plot	
Most favored (%)	90.9
Allowed regions (%)	8.7
Outliers (%)	0.4
Clashscore (%)	7.7
Rotamer outliers (%)	2.4
