SP Table 2. Source and origin of *Staphylococcus aureus* isolates

Strain	Hospitalization area	Outpatient area	Sample	Diagnosis
40900	Medical surgery		Abscess	Septic hip loosening
41026	Traumatology		Wound	
41192	Hematology		Catheter	Febrile neutropenic
41226	Triage		Chest injury	
41395		Infectology	Abscess	
41399	Urology		Abscess	
41524	ICU		MiniBAL	Ventilator-associated infection
41598	ICU		BAL	Endovascular pathology, ventilator-associated infection.
41627	Medical surgery		Blood	Anemic syndrome
41668		Traumatology	Knee section	Cellulitis
41674	Medical surgery		Drainage	Weapon wound
41759	Medical surgery		Blood	
41762	Plastic surgery		Fistula	Gluteus silicone prosthesis

BAL: Bronchoalveolar lavage

SP Figure 1. SDS gel of the recombinant *egc* SAgS.

Recombinant *egc* SAgS were purified by affinity and size exclusion chromatography. To evaluate the purity of the recombinant proteins, an electrophoretic chromatography under denaturant conditions (SDS gel) was carried out. The gel was stained with Coomassie blue. As it is showed, one band of proper molecular weight is observed in all cases, except dimmer form for SEO.

SP Figure 2. Bacteria phagocytosis by THP-1 cells is not affected by SAg incubation.
THP-1 cells were incubated with SAg for 48h and phagocytosis capacity of fluorescent bacteria was measured by flow cytometry. Data are expressed as the mean \pm SEM of at least three independent experiments. Asterisks represent statistical significance with respect to untreated cells within each treatment: ns= non-significant difference.
