200NP vs 200NP-	48.79	0.001	* $p<0.05$
-----------------	-------	-------	------------

Online Resource 1 Tukey Honest Significant Difference post-hoc test values for growth rates comparisons (calculated via least squares fitting methods) of **(a)** wild type (Fd33) and **(b)** halotolerant (HSF33-2) strains in solution with 20, 100, or 200 nm-diameter gold nanoparticles (NPs) over a period of 9 (Fd33) or 11 (HSF33-2) days. Cells grown in absence of AuNPs served as control (C) and gold colloids alone were denoted as AuNP only (NP-).

(a)

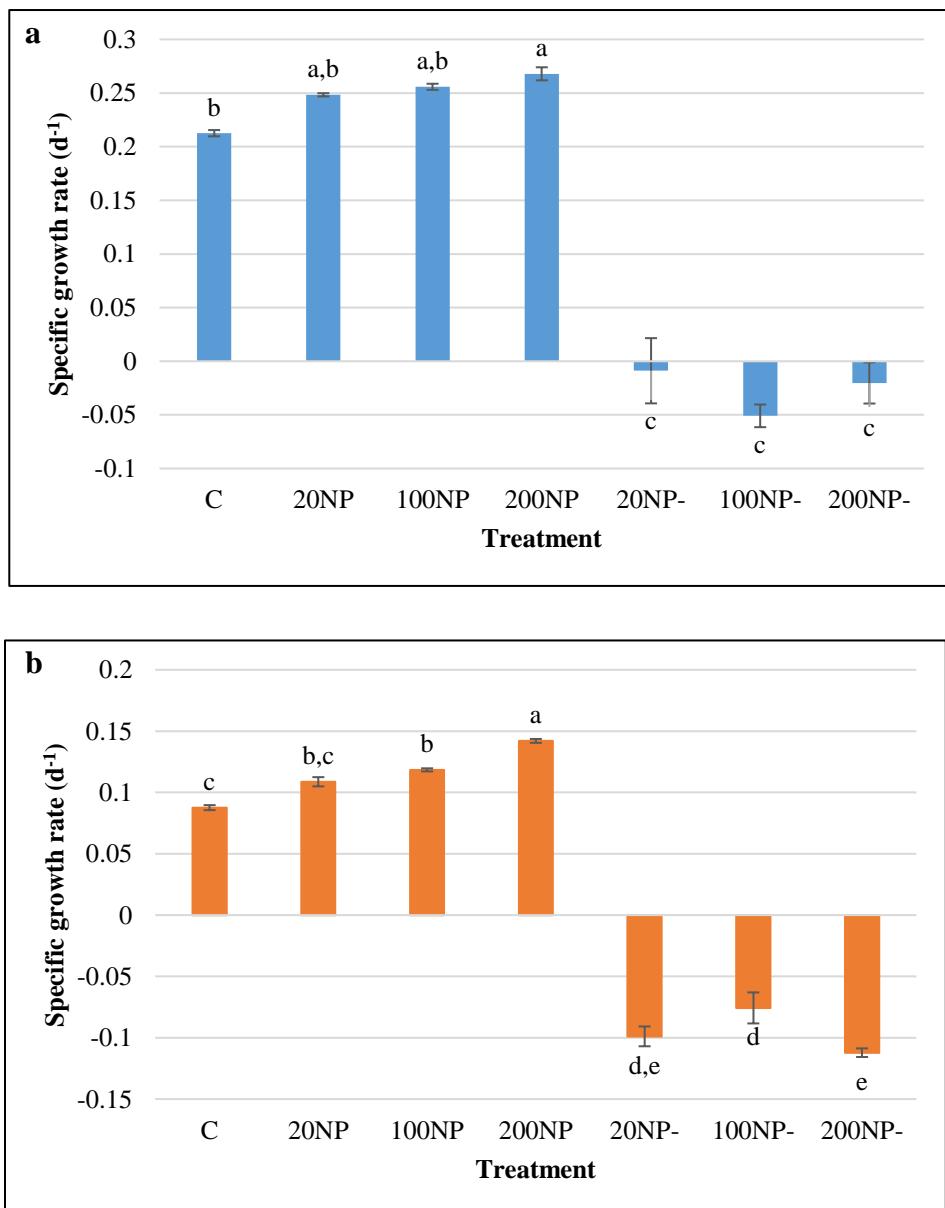

Treatment pairs	Q-statistic	p-value	Inference
C vs 20NP	0.11	0.900	insignificant
C vs 100NP	0.25	0.900	insignificant

Online Resource 2 Specific growth rates (μ) of *Fremyella diplosiphon* **(a)** wild type (Fd33) and **(b)** halotolerant (HSF33-2) in solution with 20, 100, or 200 nm-diameter gold nanoparticles (NPs) over a period of 9 (Fd33) or 11 (HSF33-2) days. Cells grown in absence of AuNPs served as control (C) and gold colloids alone were denoted as AuNP only (NP-). Bars represent average growth rates (\pm standard error) for three biological replicates of each treatment. Different letters above bars indicate significance among treatment means at each time point ($p < 0.05$).

Online Resource 3 Partitioning of variance for comparison of specific growth rate (μ) in *Fremyella diplosiphon* **(a)** wild type (Fd33) and **(b)** halotolerant (HSF33-2) strains using one-way class I analysis of variance.
