

Supplemental Fig. 1. Effect of FLAP inhibitor, MK-886, on multiplication of influenza virus and production of 5-HETE. MDCK cells were inoculated with influenza A/PR/8/34 virus at a MOI of 0.001. (A) Effect of MK-886 on titer of influenza virus. Viral titers were determined at 24 h post-infection by focus-forming assays. (B) Effect of MK-886 on 5-HETE production. Data are presented as mean \pm SD ($n = 3$). Data are representative of three independent experiments. * $p < 0.005$, ** $p < 0.001$.
