Figure S1. PCSK9Q β -003 vaccine decreased plasma TC in mice intervened by L-NAME.

(A) Process of animal experiments in the LDLR^{+/-} mice + L-NAME. (B-D) LDLR^{+/-} mice fed with HCD presented changes of steadily increased blood lipid level. (E) The anti- PCSK9Q β -003 titers were measured by ELISA. (F-H) The TC, LDL-C and TG was decreased in the PCSK9Q β -003 vaccine group compared with the other groups. (I) The total PCSK9 level was significantly elevated in the PCSK9Q β -003 vaccine group compared to the other groups. n = 6 per group. Data were expressed as means \pm SEM. &P<0.05 versus the Control group; #P<0.05 versus the PBS group; *P<0.05 versus the Q β virus-like particles group.

Figure S2. PCSK9Q β -003 vaccine decreased hepatic steatosis in mice induced by L-NAME.

(A) Histology of the livers stained with H&E and Oil-red O (Bar 50=μm). (B) Representative Oil Red O stained liver sections showed that the PCSK9Q β -003 vaccine markedly prevented the formation of fatty liver. (C, D) Hepatic TC and TG contents. n = 6 per group. Data were expressed as means \pm SEM.
