

Supplementary Figure 1. Circular map of the *E. coli* 16F5M1D1 (O8:H8) chromosome.

The outermost to innermost circles are as follows: 1st, nucleotide sequence positions; 2nd and 3rd, CDSs transcribed clockwise and counterclockwise, respectively; 4th, CDSs conserved in *E. coli* K-12 ($\geq 80\%$ identity and $\geq 60\%$ coverage); 5th, locations of prophages (PPs) and integrative elements (IEs) (red: LT PPs, orange: other PPs, brown: IEs); 6th, rRNA; 7th, tRNA; 8th, GC content; and 9th, GC skew.

Supplementary Figure 2. Genetic structures the CFAIII-encoding plasmid.

Supplementary Table1. General genomic features of *E. coli* O8H8 strain 16F5M1D1

Chromosome	
Length (bp)	4,800,098
CDSs	4438
rRNA operons	22
tRNAs	91
Prophages	5
Integrative elements	2
Plasmid 1	
Length (bp)	102,846
CDSs	111
Plasmid 2	
Length (bp)	3,717
CDSs	5
Plasmid 3	
Length (bp)	2,732
CDSs	3
Total genome size (bp)	4,909,393

Supplementary Table 2. Reference strains of *E. coli* and *Escherichia* cryptic clade 1 used in this study
